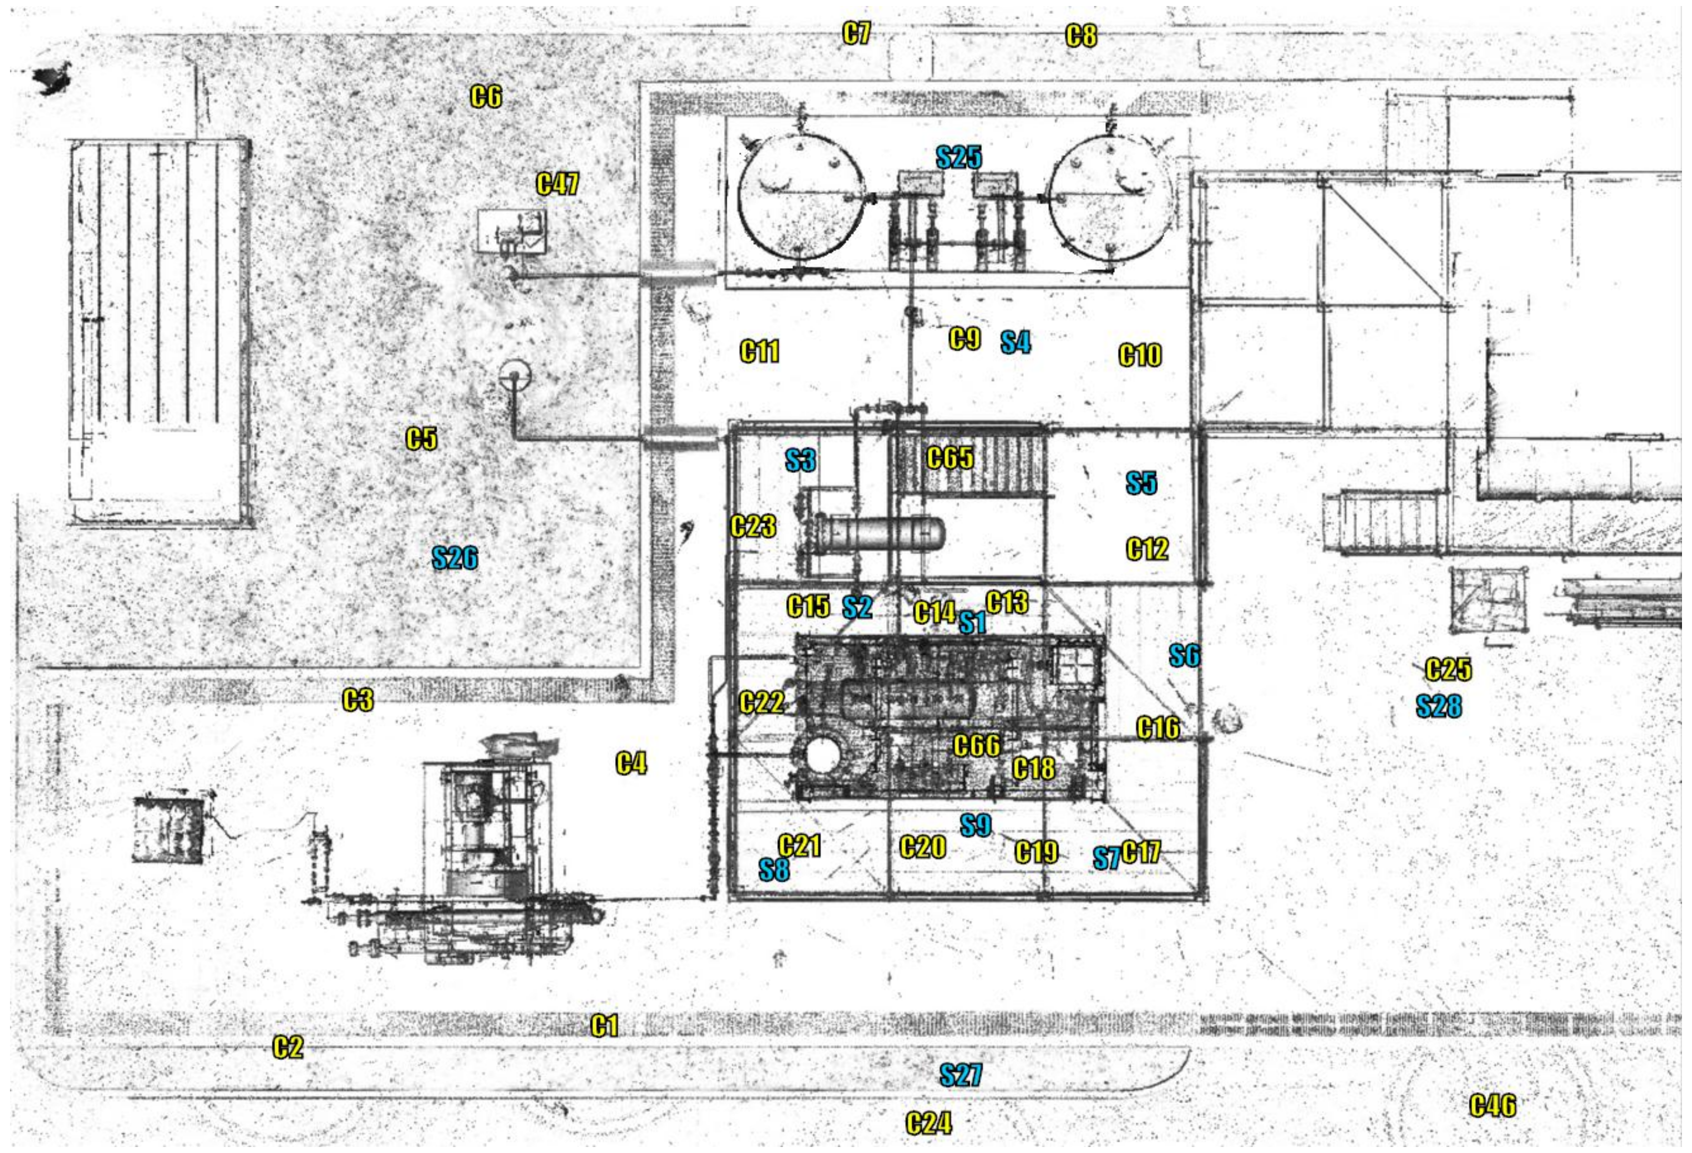
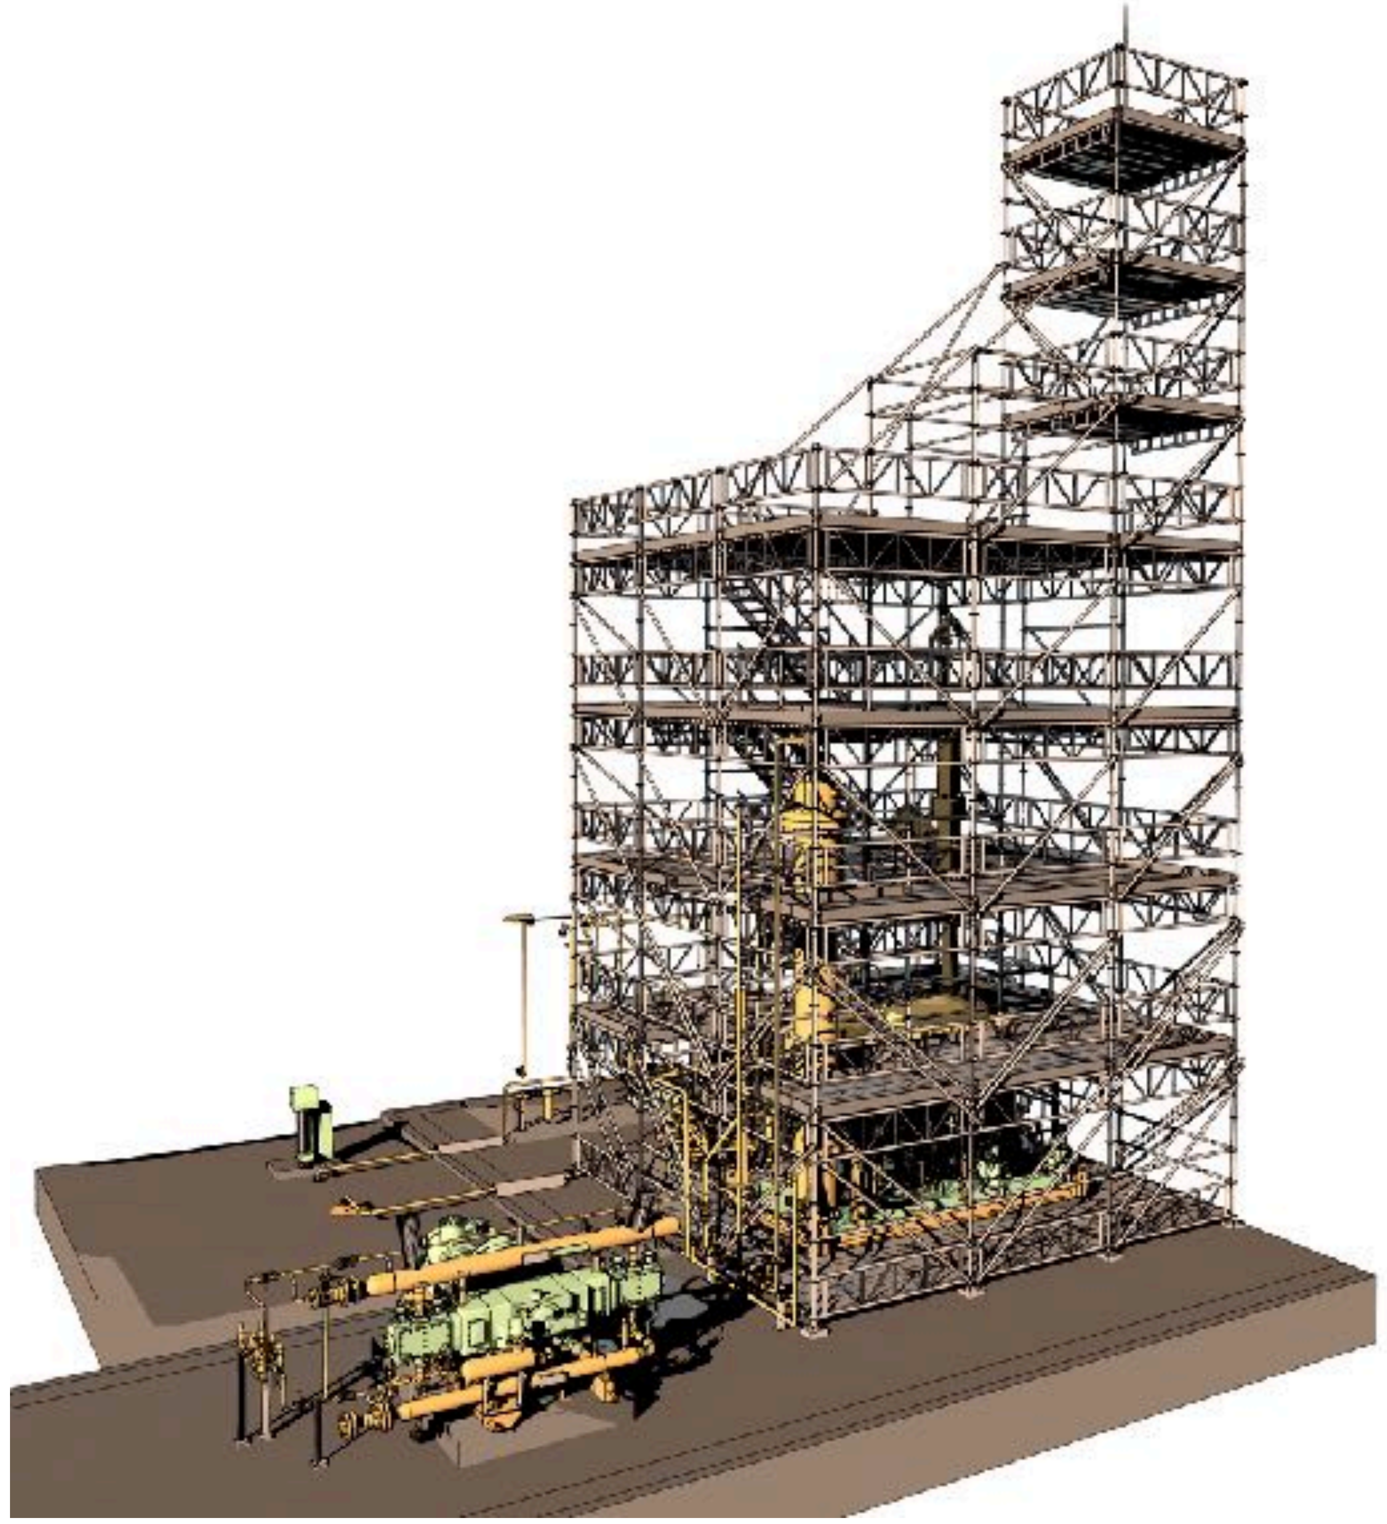
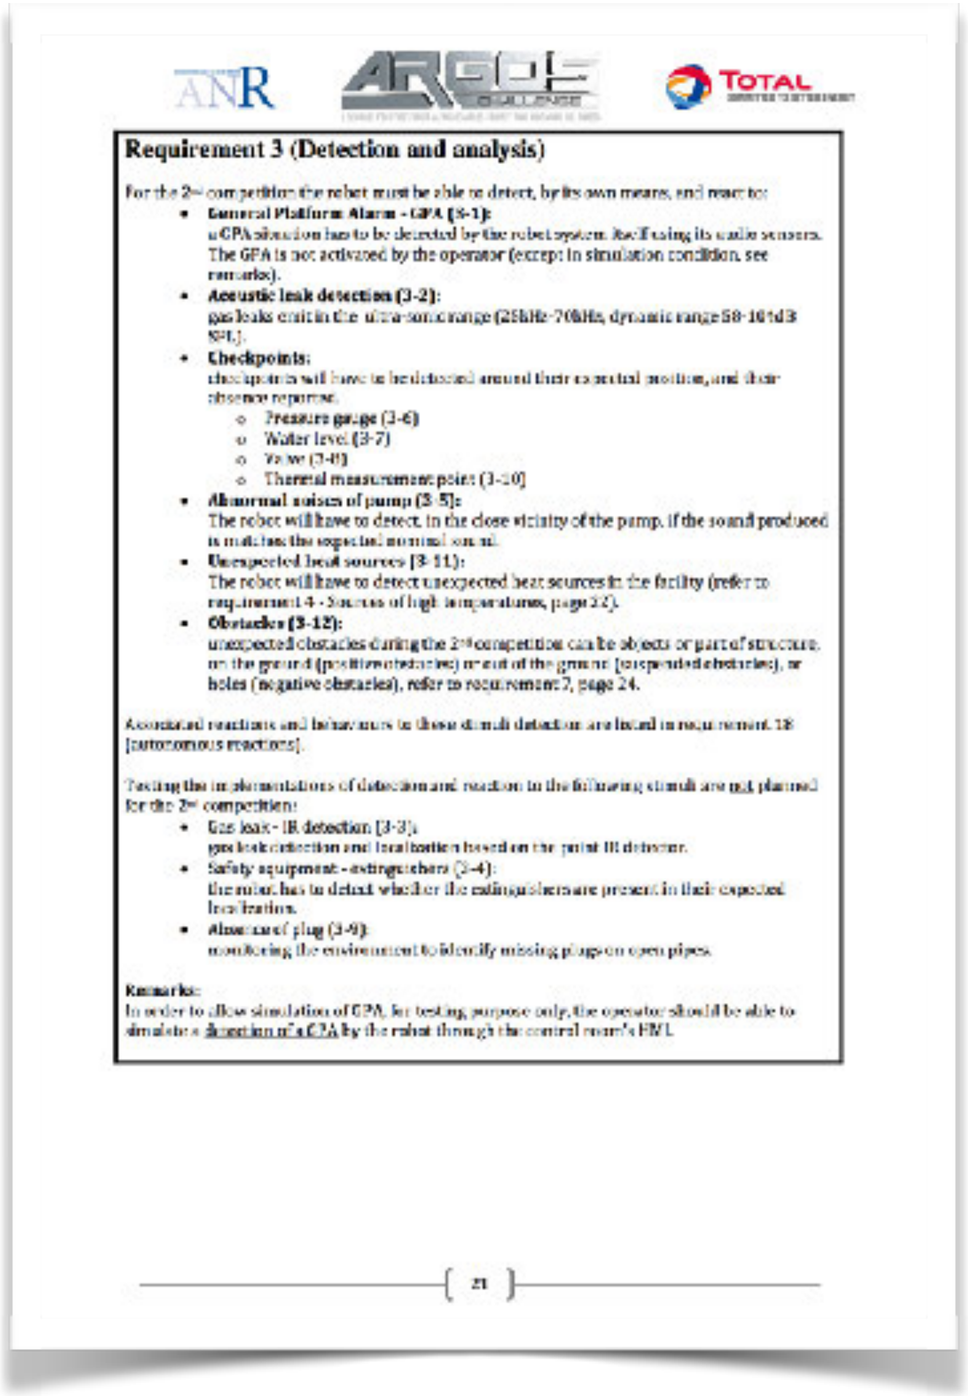
Autonomous Inspection of Oil and Gas Sites







ANR ARGOS CHALLENGE TOTAL

Requirement 3 (Detection and analysis)

For the 2nd competition the robot must be able to detect, by its own means, and react to:

- **General Platform Alarm - GPA (3-1):**
  a GPA situation has to be detected by the robot system itself using its audio sensors. The GPA is not activated by the operator (except in simulation condition, see remarks).
- **Acoustic leak detection (3-2):**
  gas leaks emit in the ultra-sonic range (25kHz-70kHz, dynamic range 58-101dB SPL).
- **Checkpoints:**
  - Pressure gauge (3-6)
  - Water level (3-7)
  - Valve (3-8)
  - Thermal measurement point (3-10)
- **Abnormal noises of pump (3-5):**
  The robot will have to detect, in the close vicinity of the pump, if the sound produced
- **Unexpected heat sources (3-11):**
  The robot will have to detect unexpected heat sources in the facility (refer to
- **Obstacles (3-12):**
  unexpected obstacles during the 2nd competition can be objects or part of structure, holes (negative obstacles), refer to requirement 7, page 24.

for the 2nd competition:

- Gas leak - IR detection (3-3):
- Safety equipment - extinguishers (3-4):
- Absence of plug (3-9):
  monitoring the environment to identify missing plugs on open pipes.

Remarks:

In order to allow simulation of GPA, for testing purpose only, the operator should be able to

Locomotion
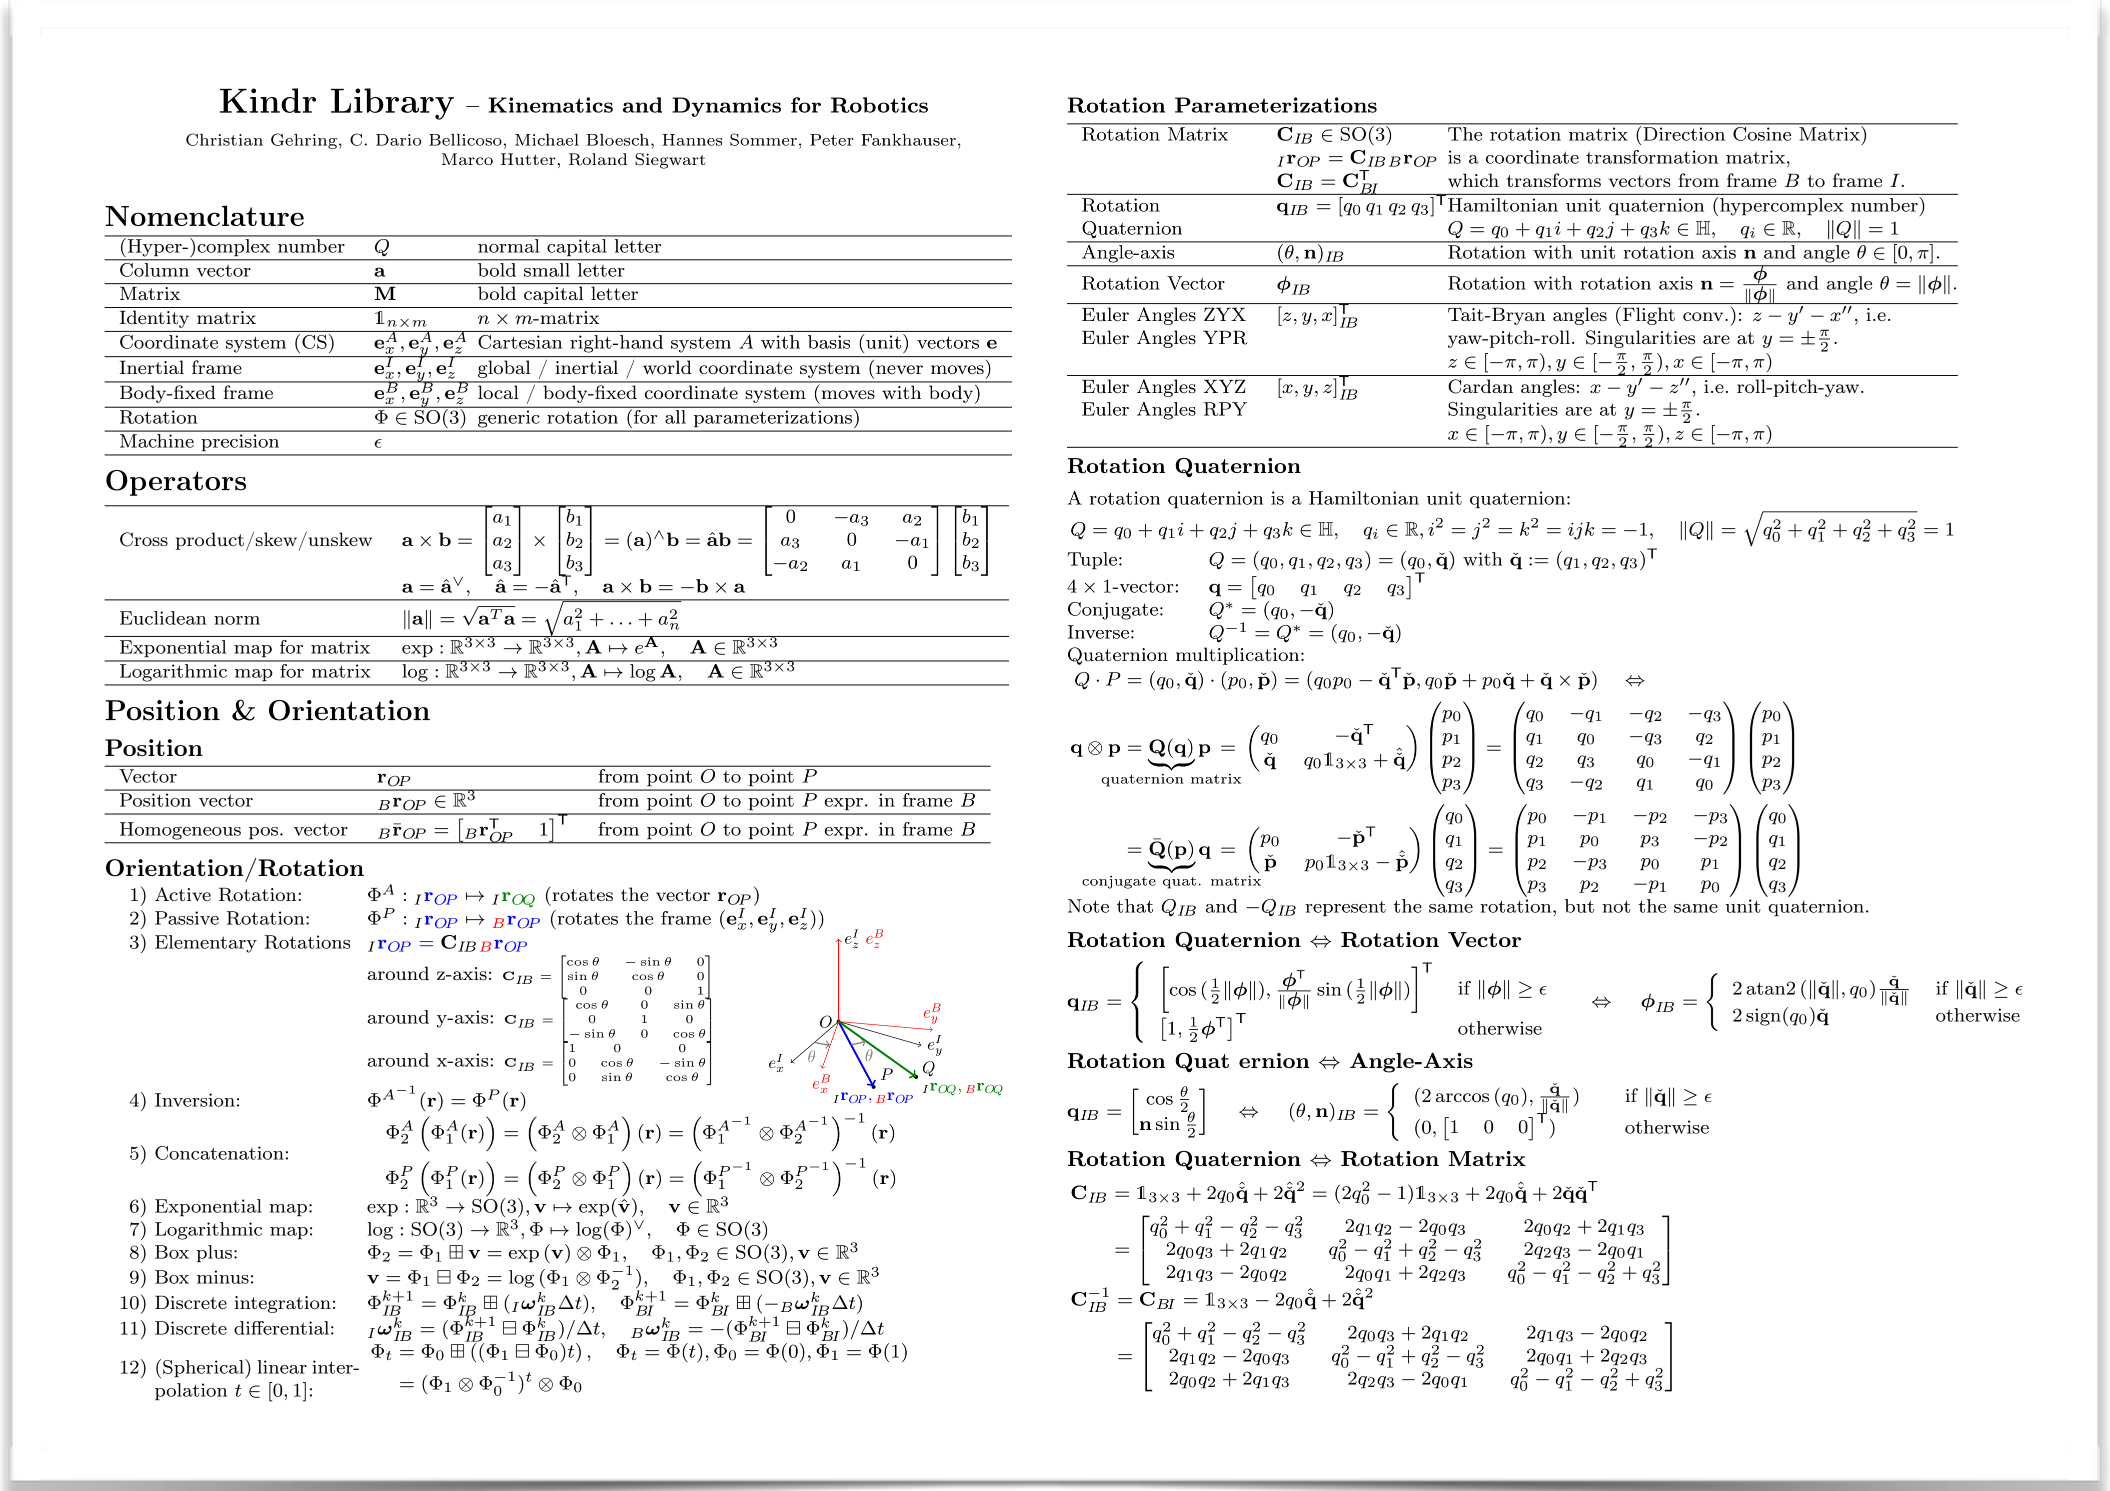
Kindr – Kinematics and Dynamics for Robotics

Open Source
github.com/ethz-asl/kindr

- C++ library for the consistent handling of 3d position and **rotations**
- Support for *rotation matrices*, *quaternions*, *angle-axis*, *rotation vectors*, *Euler angles*, etc.
- Support for all common operations and includes time-derivates
- ROS interface available
- Based on Eigen, 1000+ unit tests



Cheat-sheet (incl. derivations)

User Interface

User Interface
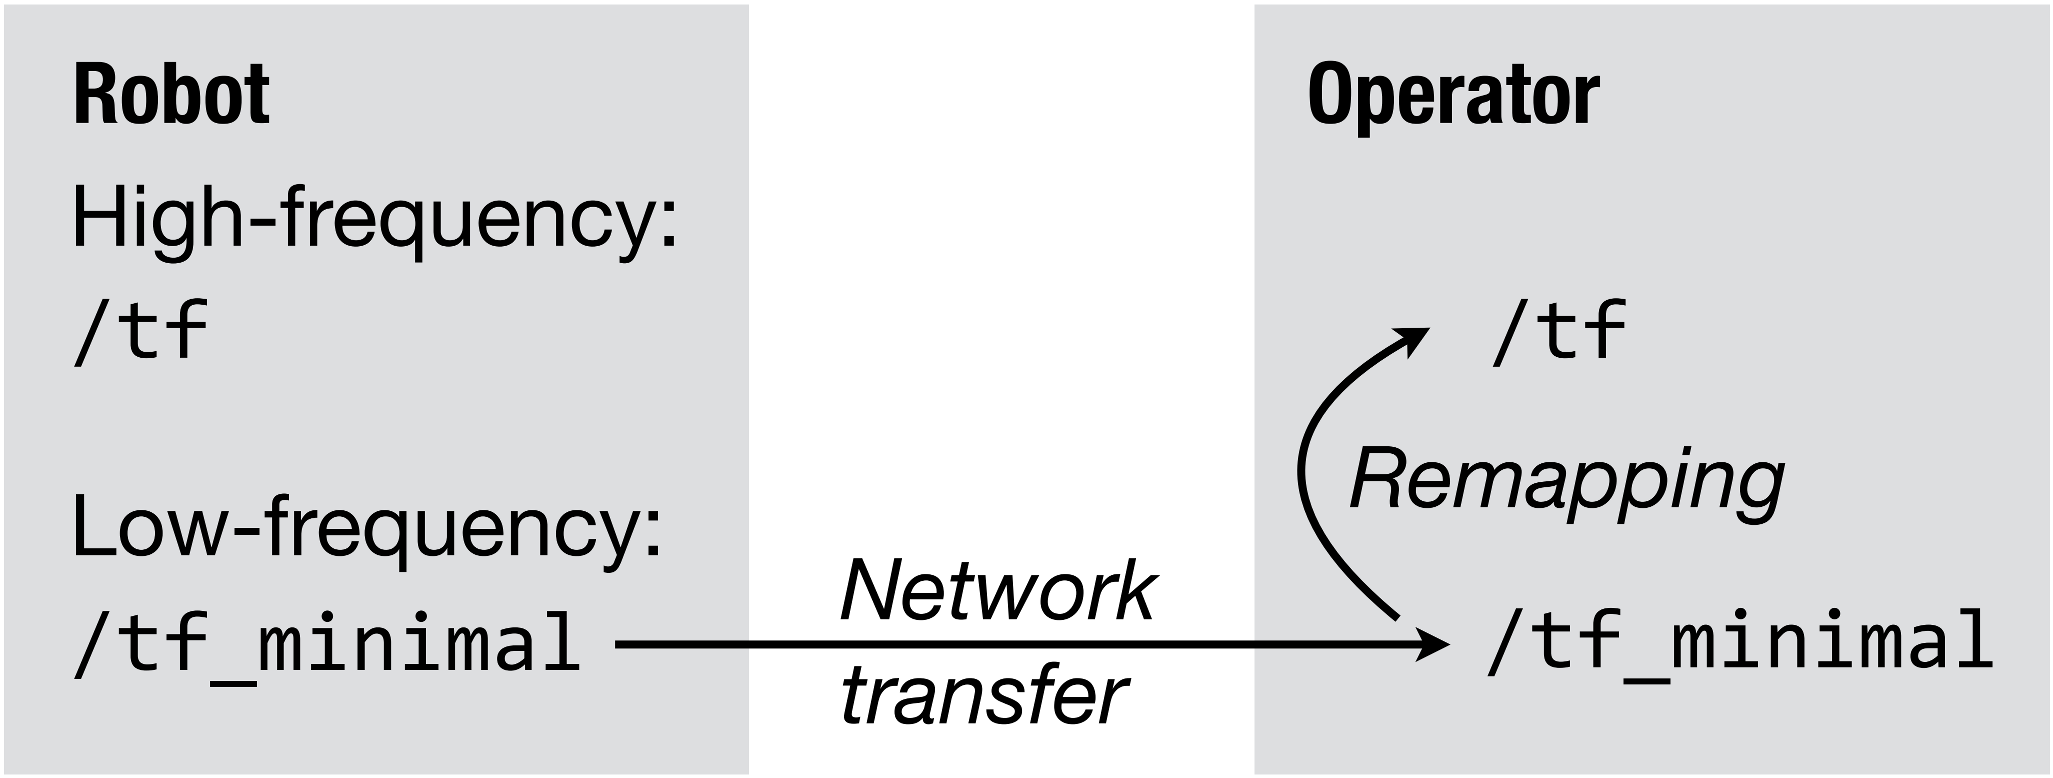
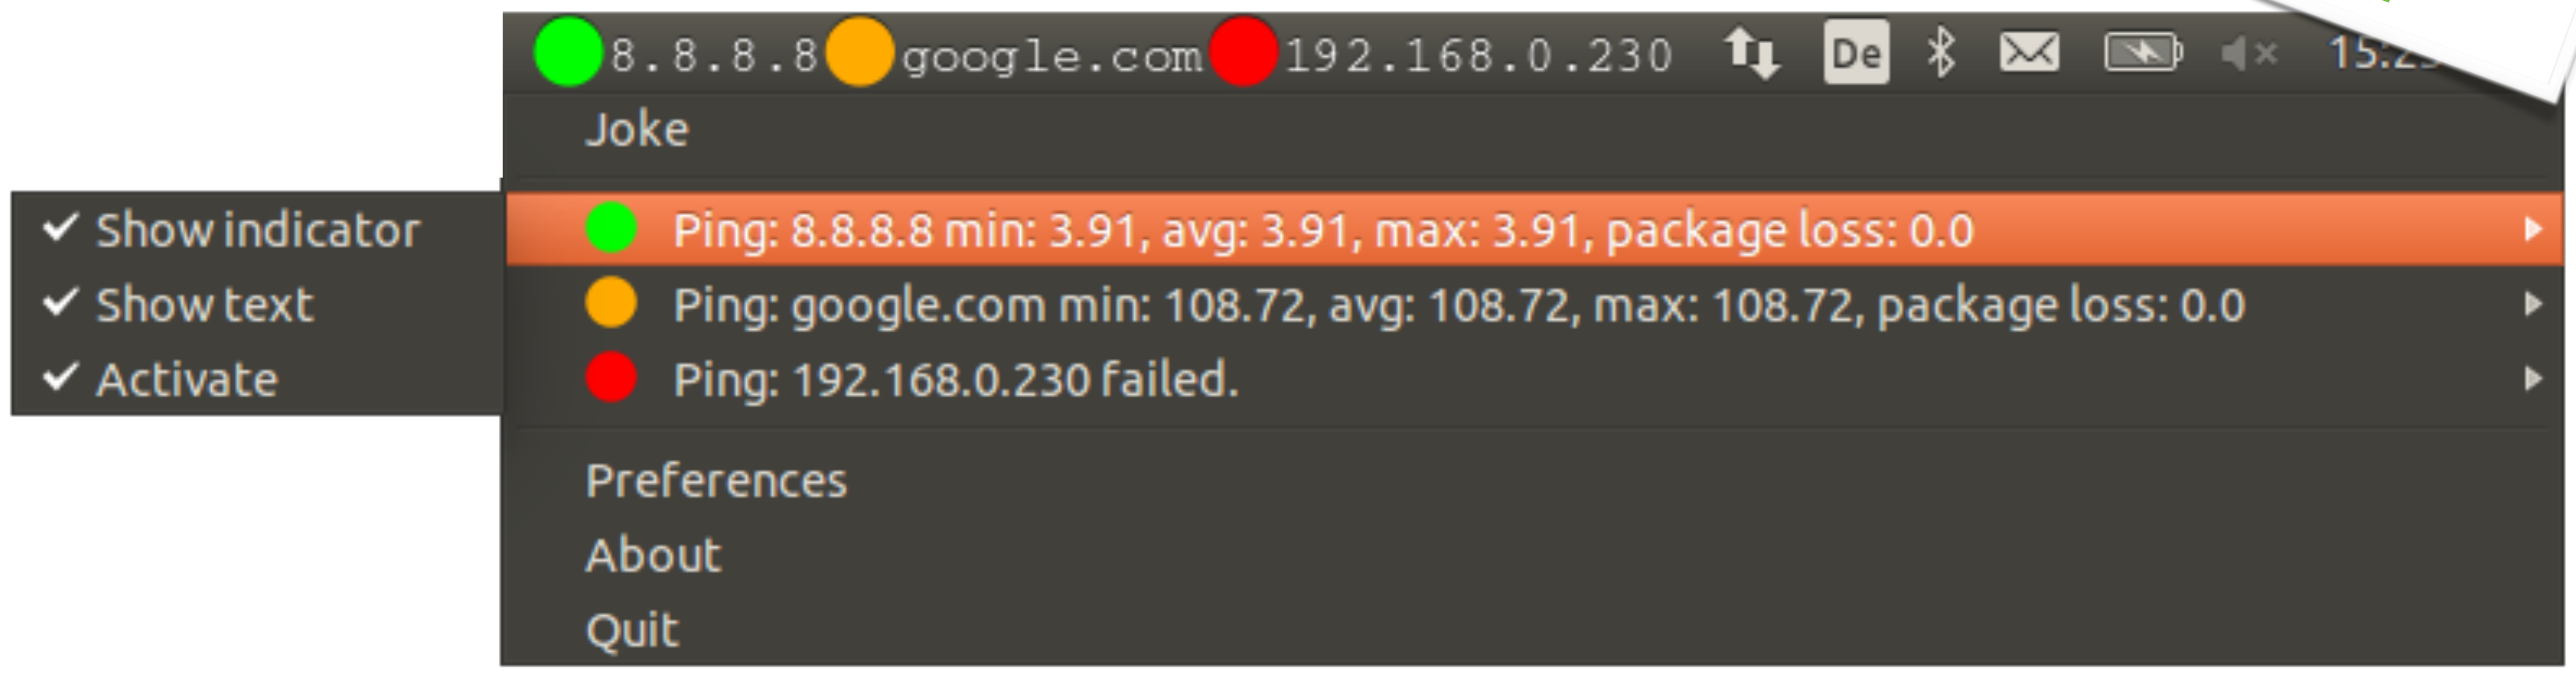
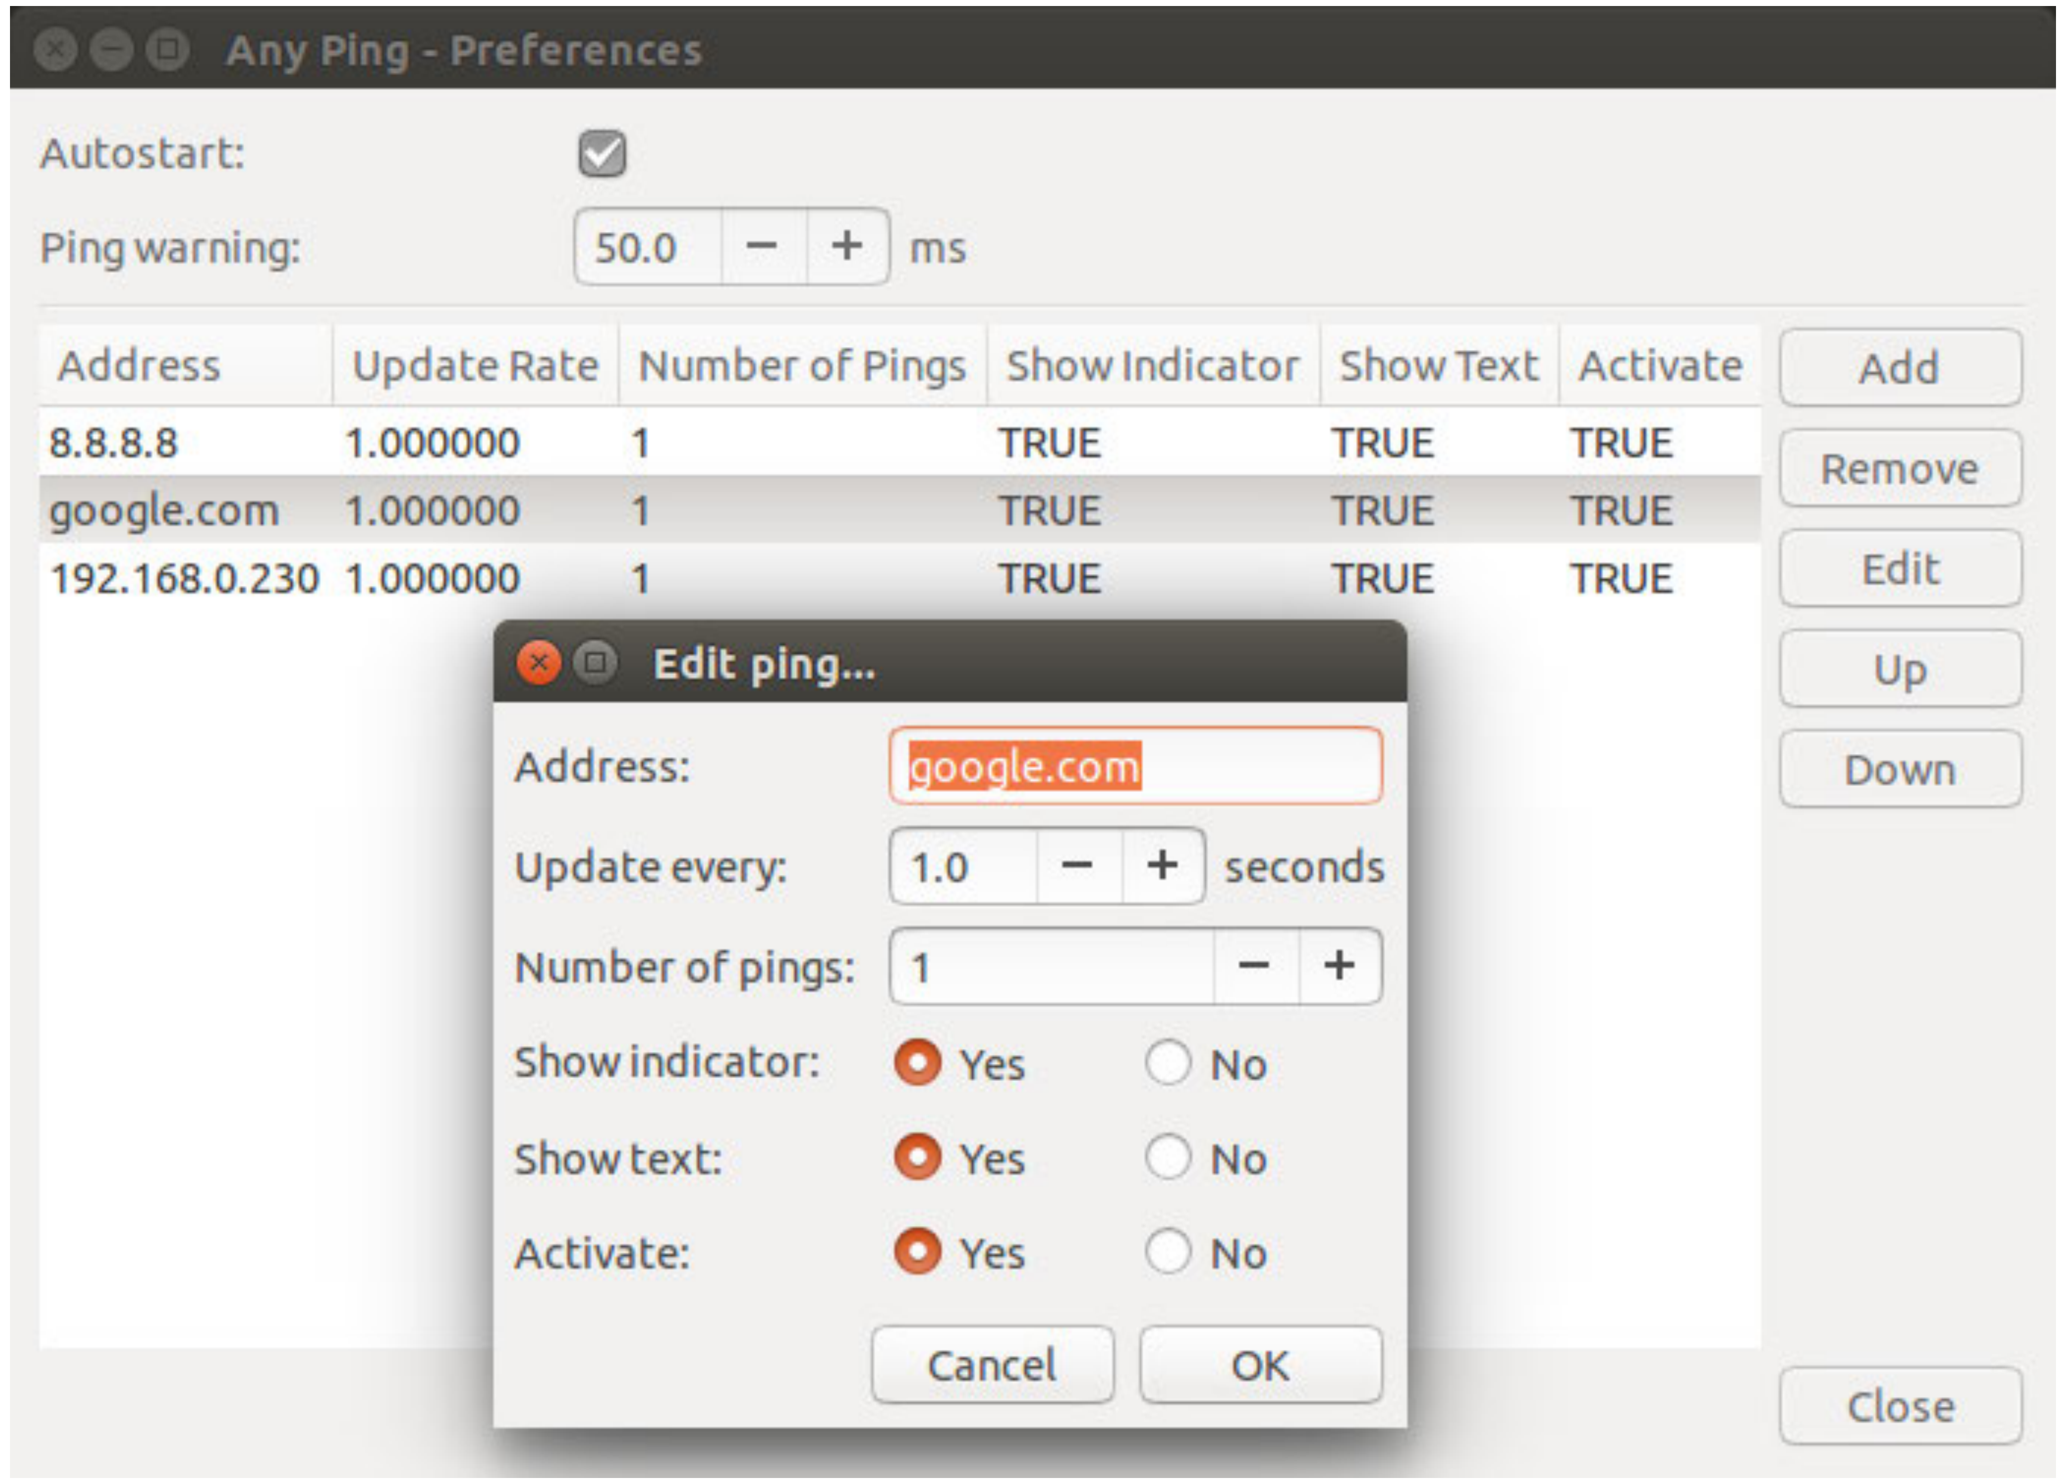
Bandwidth Considerations

- Only critical data is transmitted by default (robot state and position)
- Other data is transmitted on demand (video, maps, etc.)
- Separation of onboard TF and operator TF
- Connection status node monitors WiFi status and triggers recovery behavior



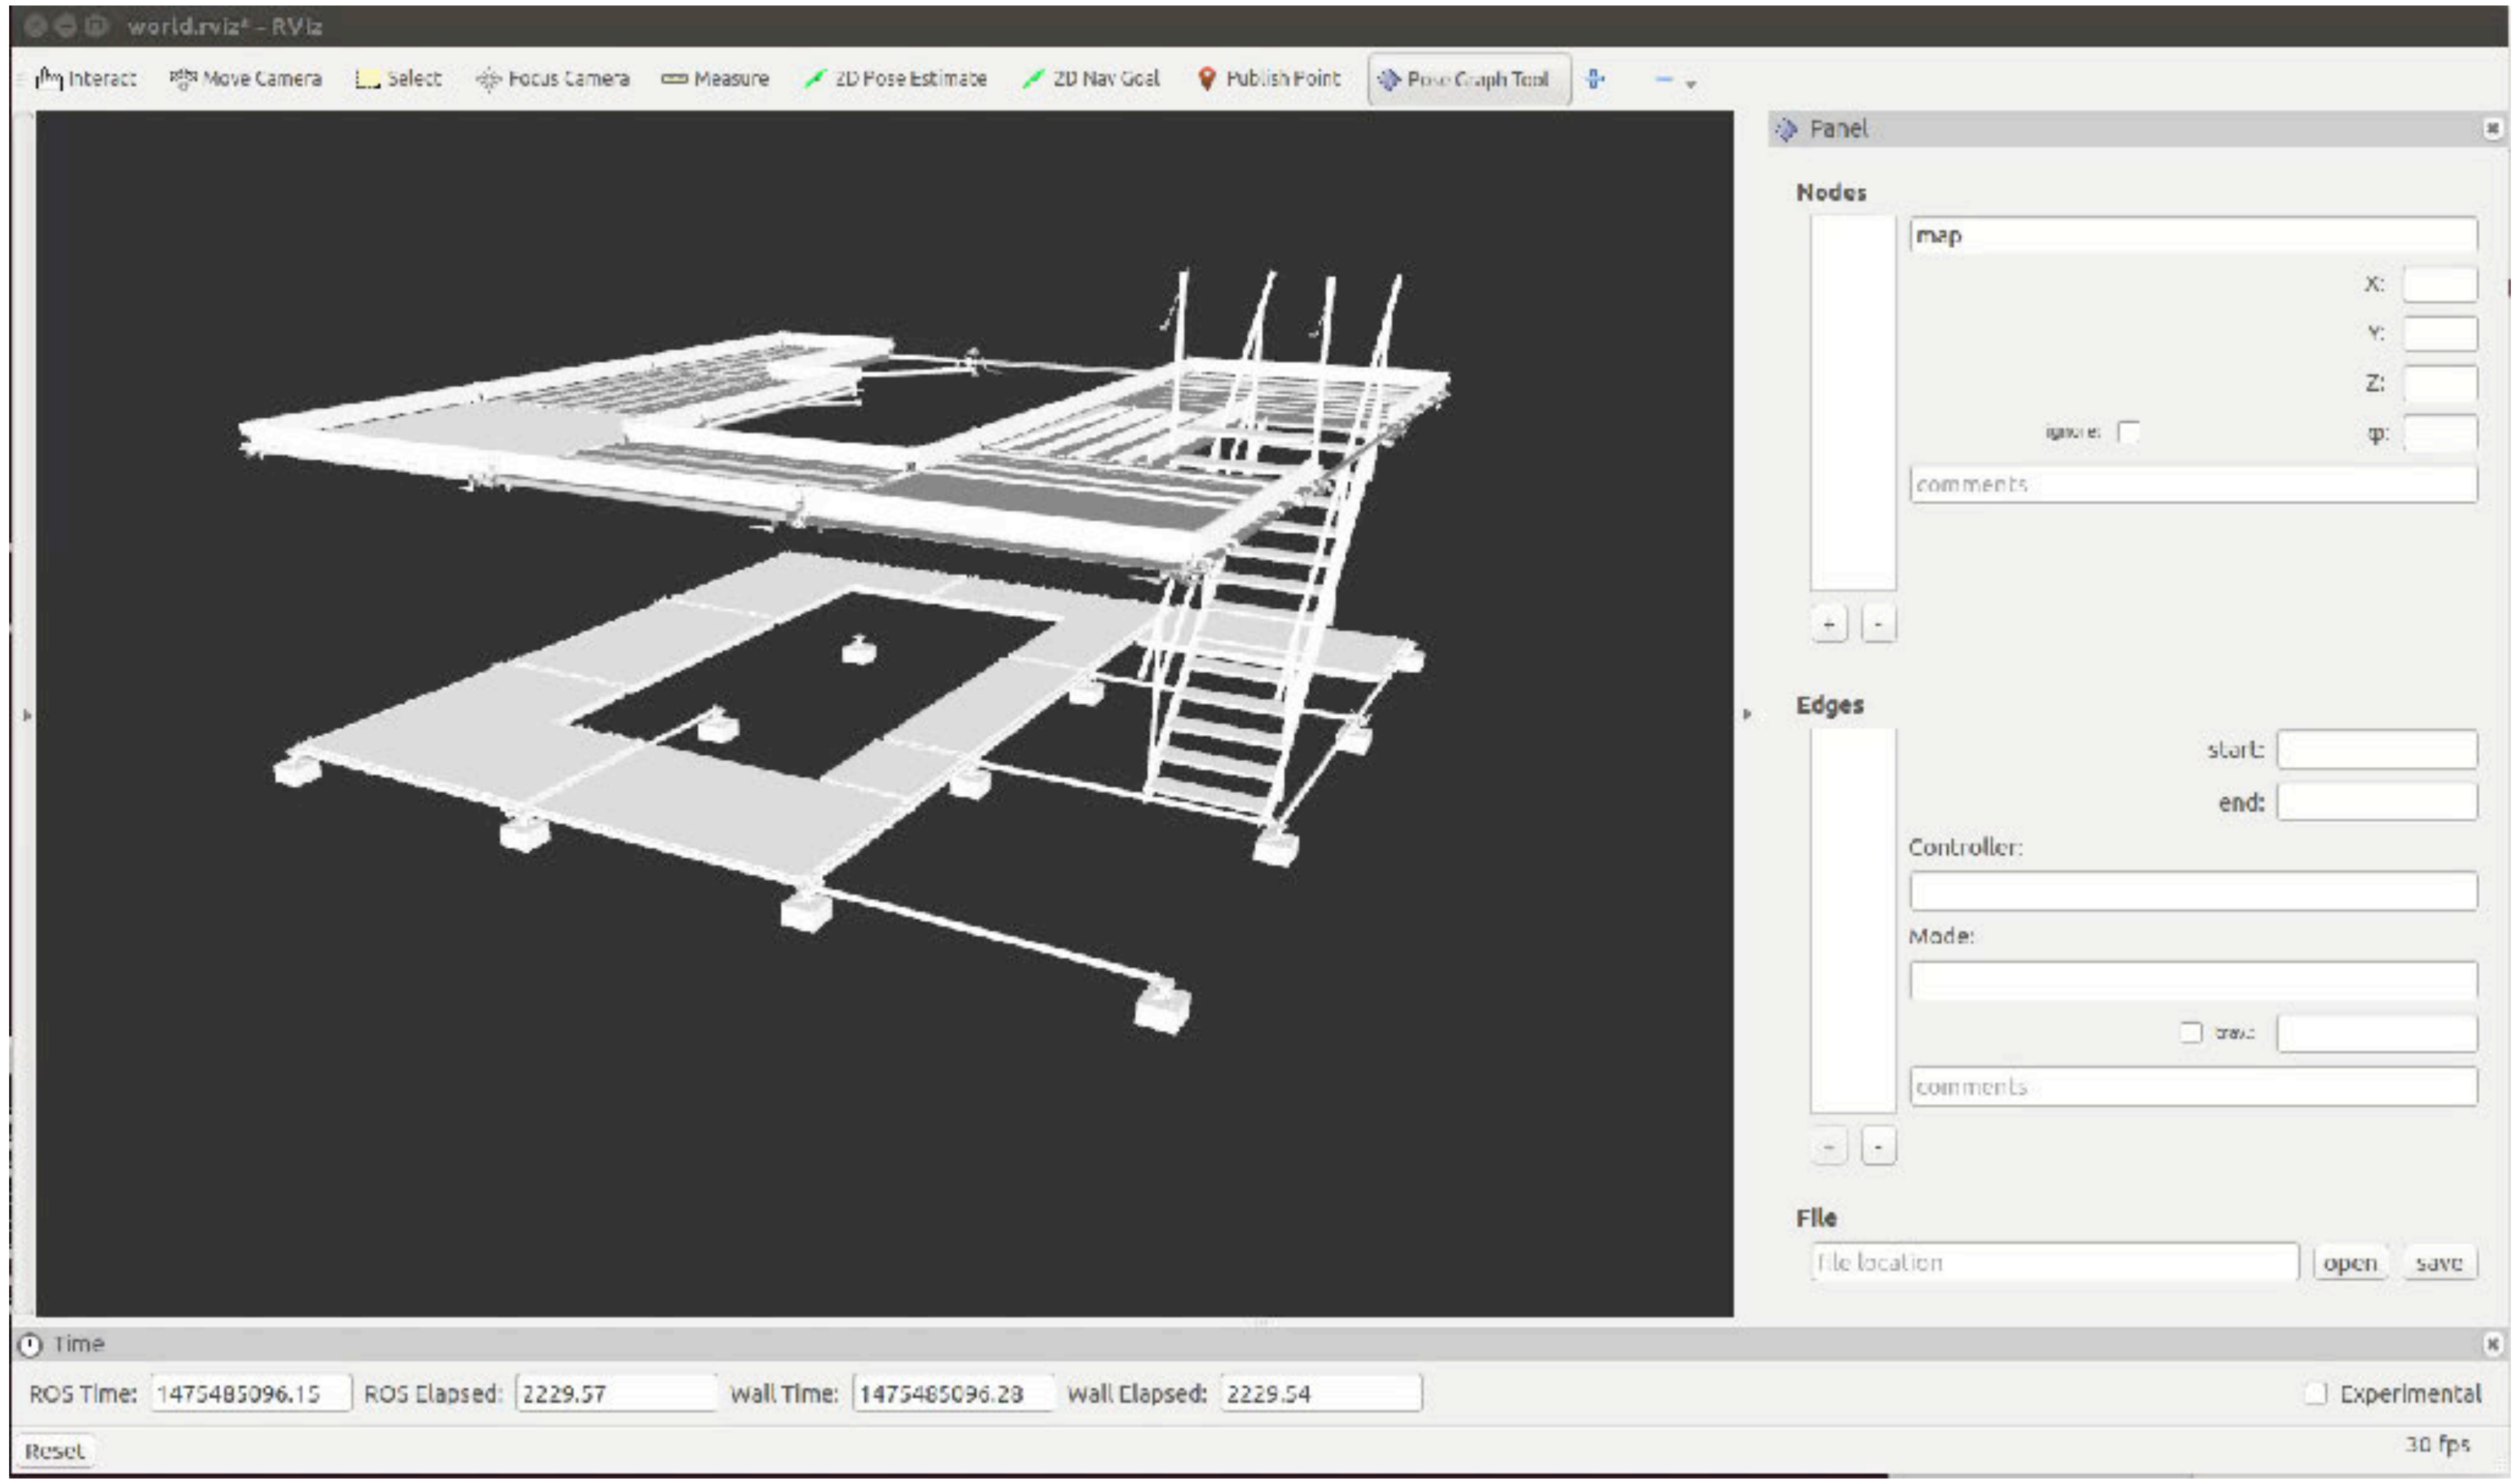
User Interface
ANYping Indicator





- Indicates PC network availability in Ubuntu menu bar

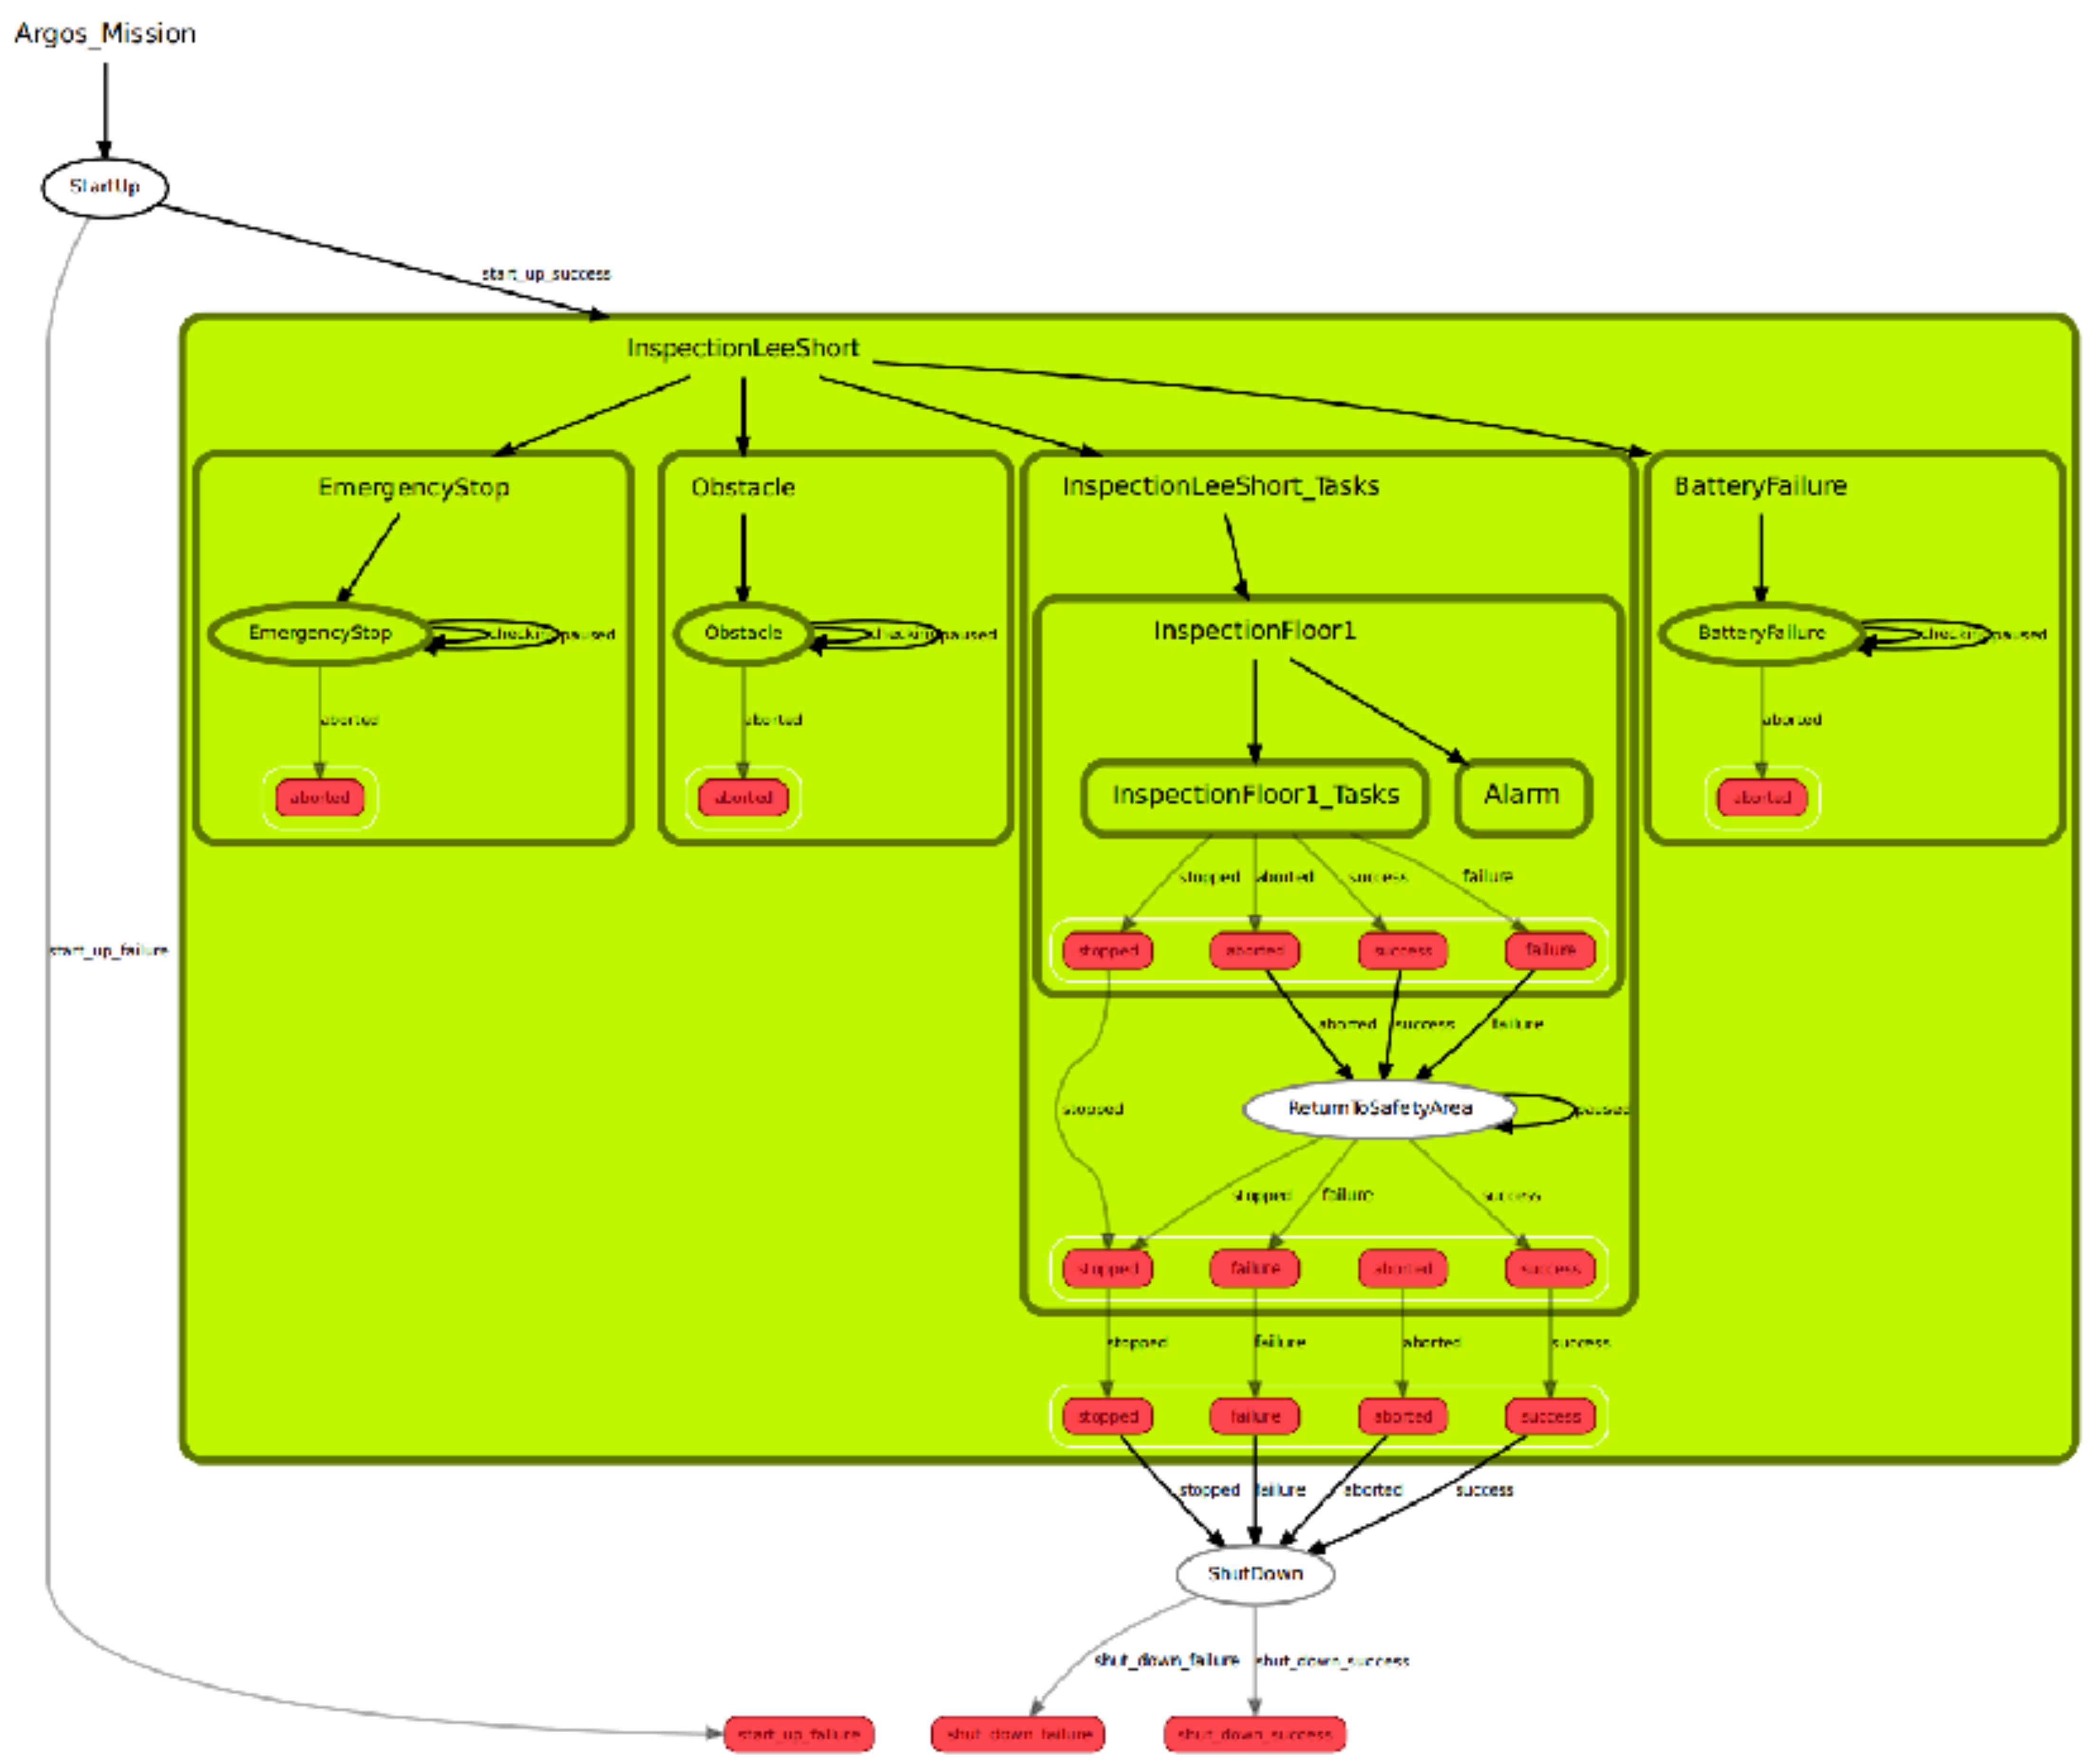
User Interface
Pose Graph



- Pose graph for inspection, special maneuvers (e.g. stairs), docking station etc.
- Visualization and interactive editing of pose graph
- Continuous updating and (re-)planning on pose graph during mission

User Interface
Mission Creation

- Task-level state machine (C++ library, similar to SMACH)
- State machine defined in YAML format
- Common building blocks to facilitate construction



User Interface
Mission Creation

- Task-level state machine (C++ library, similar to SMACH)
- State machine defined in YAML format
- Common building blocks to facilitate construction
- Typical missions programmed in 5–20 minutes

ROS Best Practices

This is a loose collection of best practices, conventions, and tricks for using the Robot Operating System (ROS). It builds up on the official ROS documentation and other resources and is meant as summary and overview.

Official ROS documentation:

- ROS Enhancement Proposals (REPs),
- ROS Use Patterns and Best Practices,
- ROS Developer's Guide.

Other References:

- ROS Best Practices: Lorenz Mösenlechner, Technische Universität München, July 2012,
- ROS Best Practices: Tully Foote, Open Source Robotics Foundation, October 2014,
- ROS Design Patterns, C++ APIs, and Best Practices: Jonathan Bohren, Laboratory for Computational Sensing and Robotics, The John Hopkins University,
- ROS Answers.

In parts, the document describes opinionated best practices established within the Legged Robotics Group from the Autonomous Systems Lab, ETH Zurich.

Author: Péter Fankhauser, pfankhauser@ethz.ch
Affiliation: Autonomous Systems Lab, ETH Zurich

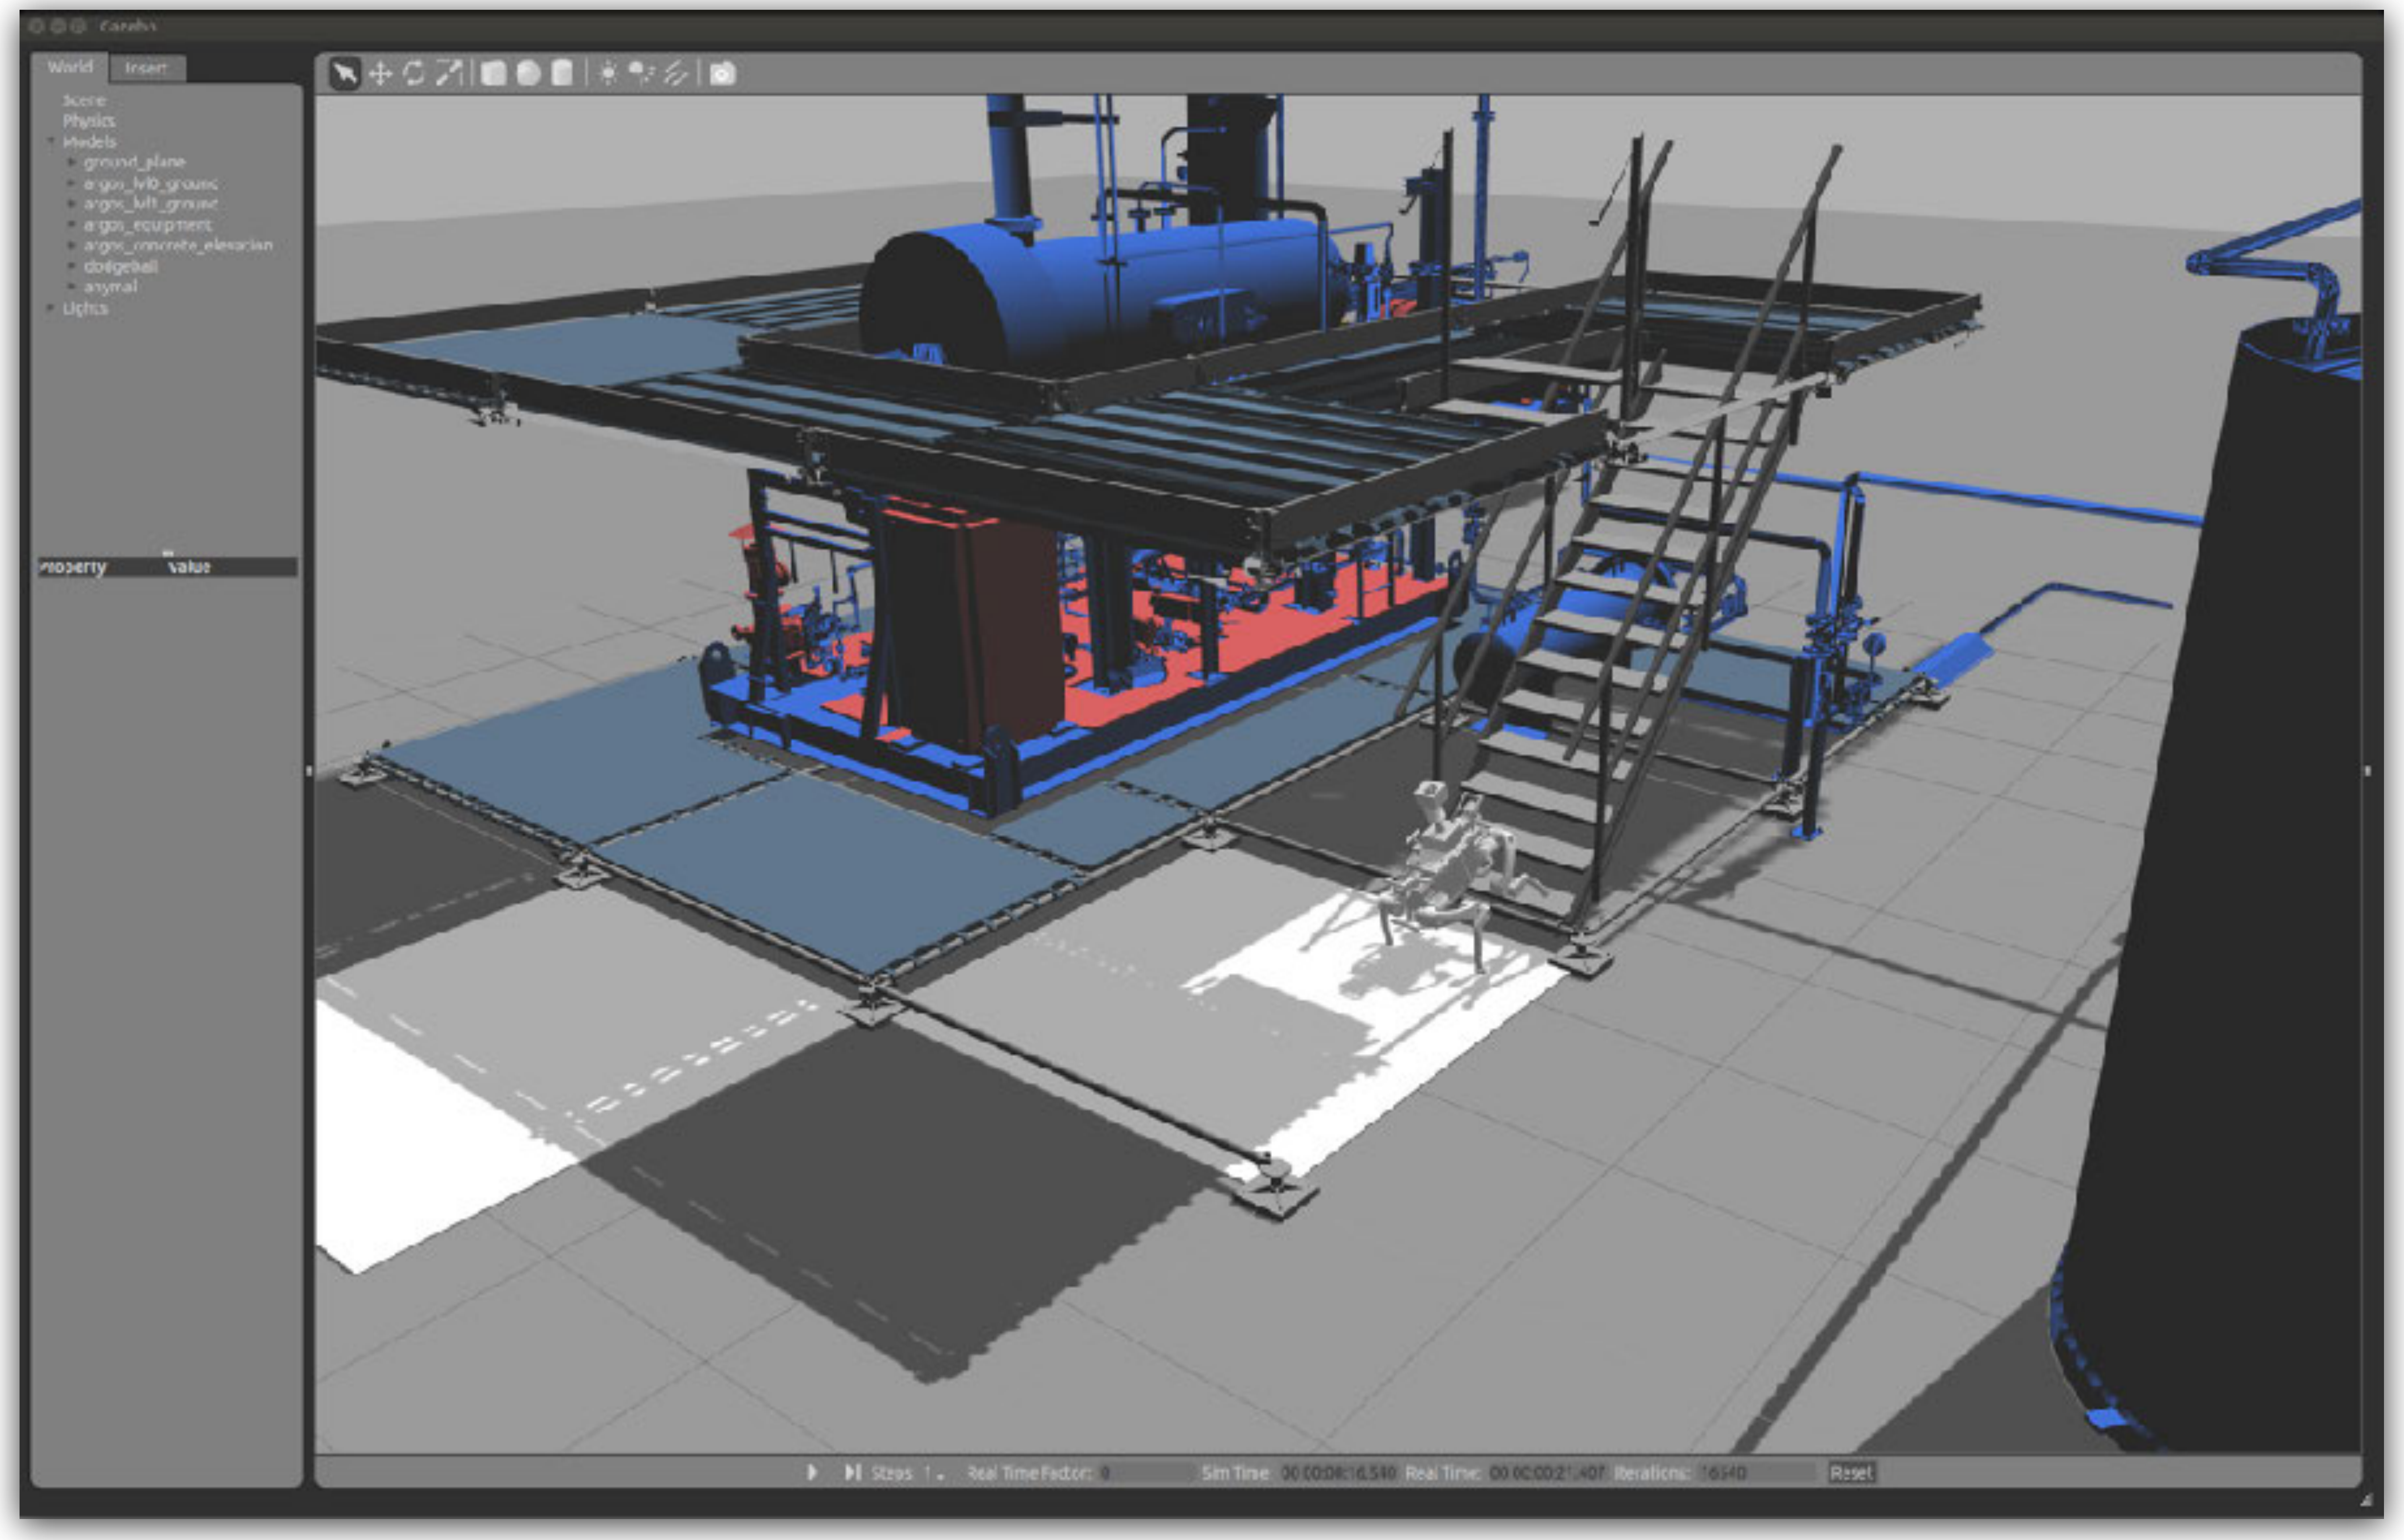
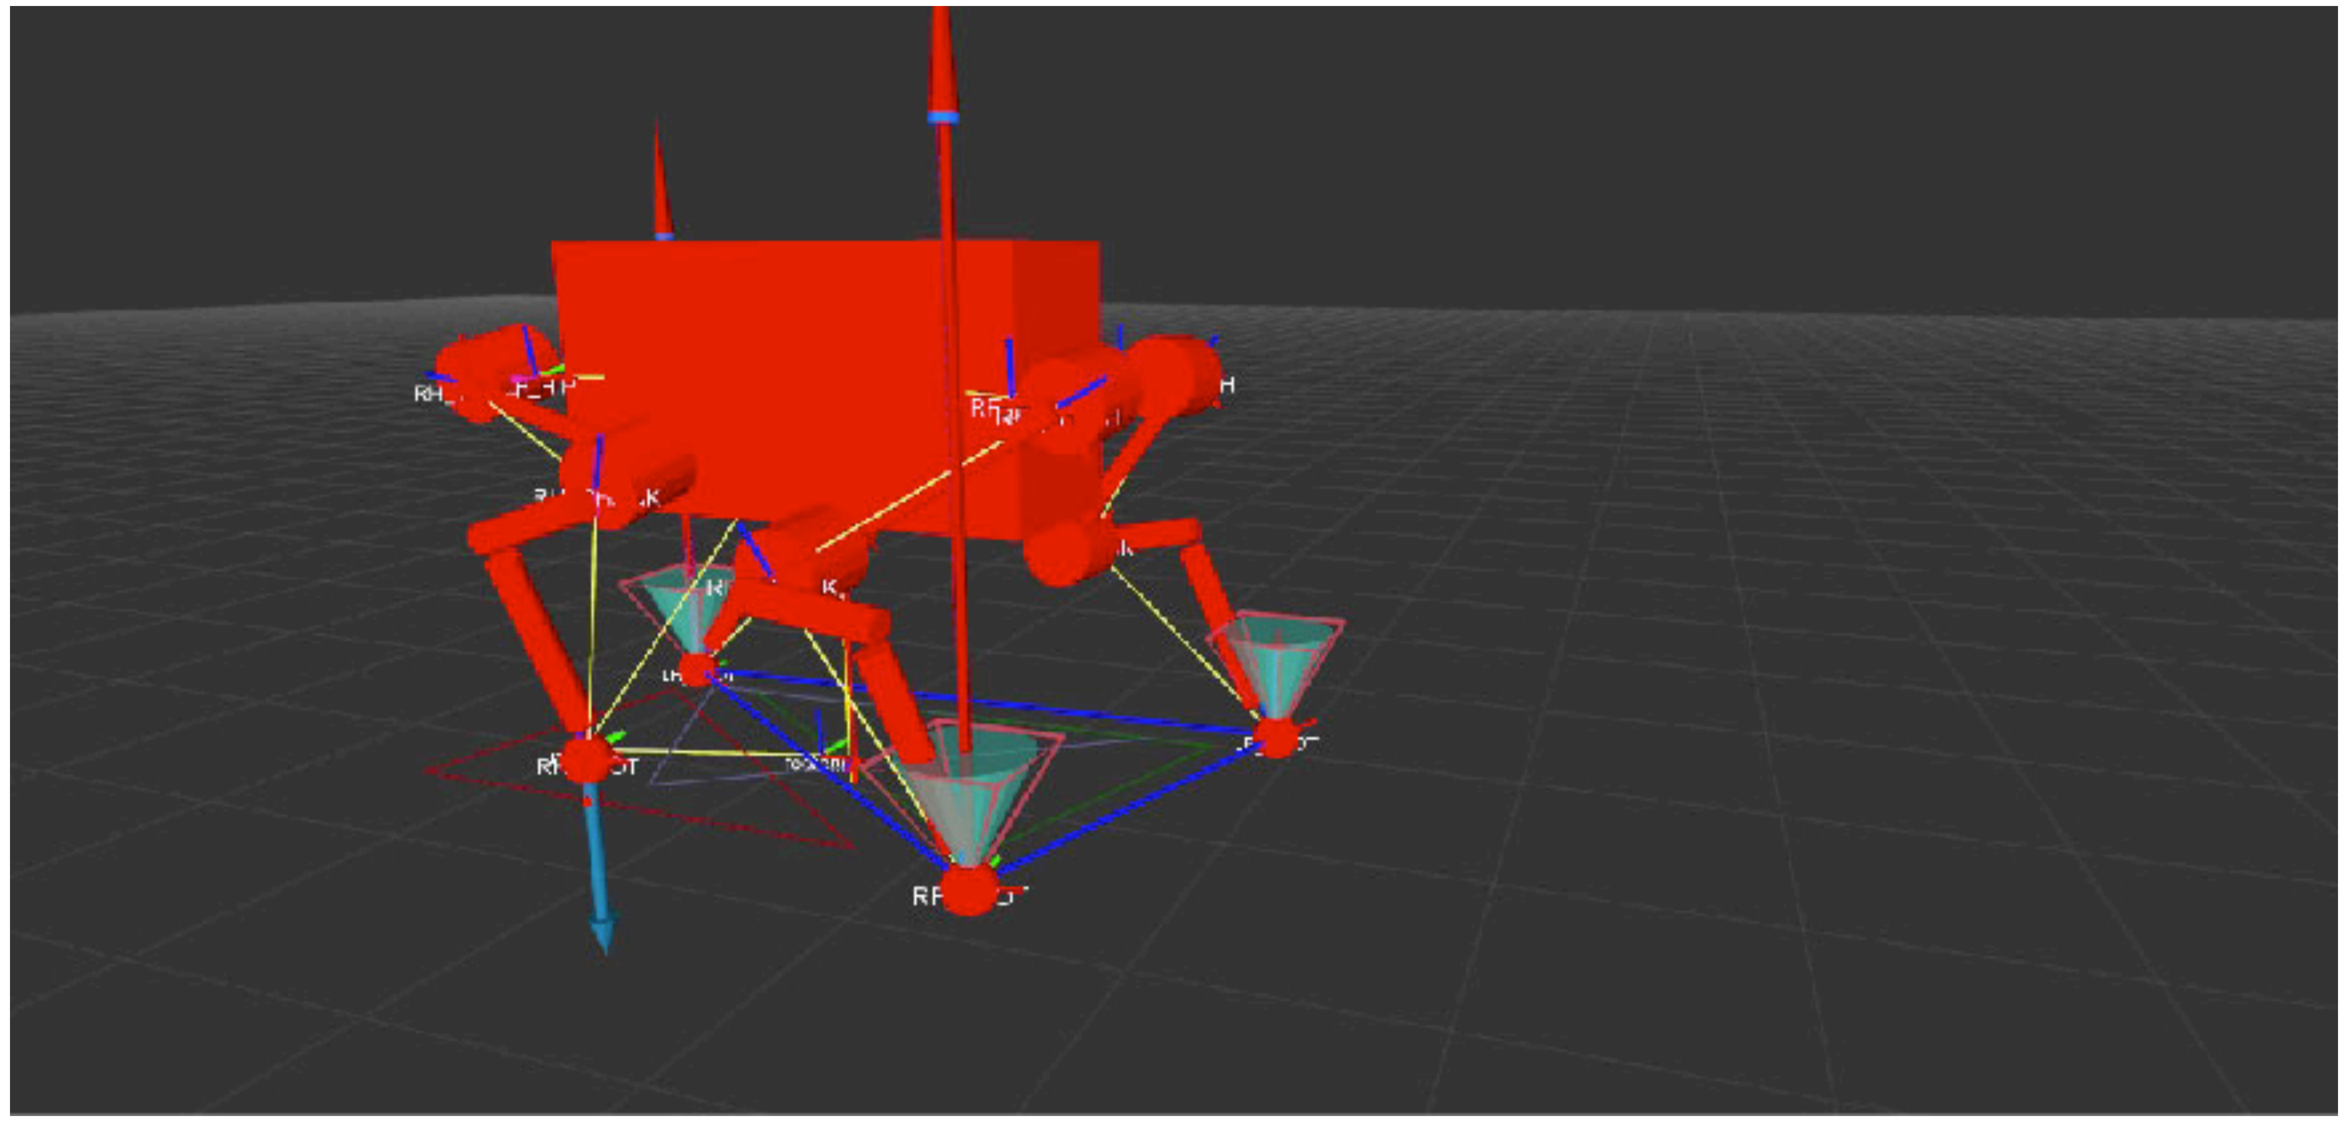
- Conventions for package structure, format, naming, and code style
  - ➡ github.com/ethz-asl/ros_best_practices/wiki
- Extensive use of simulation
  - ➡ Gazebo



Software Tools – How We (Try) To Keep Things Smooth

- All developers and robots same setup
  - ➡ Ubuntu 14.04 LTS, ROS Indigo
- Software version control with Git
  - ➡ Bitbucket & GitHub
- Conventions for package structure, format, naming, and code style
  - ➡ github.com/ethz-asl/ros_best_practices/wiki
- Extensive use of simulation
  - ➡ Gazebo
- Visualizing as much as possible



Software Tools – How We (Try) To Keep Things Smooth

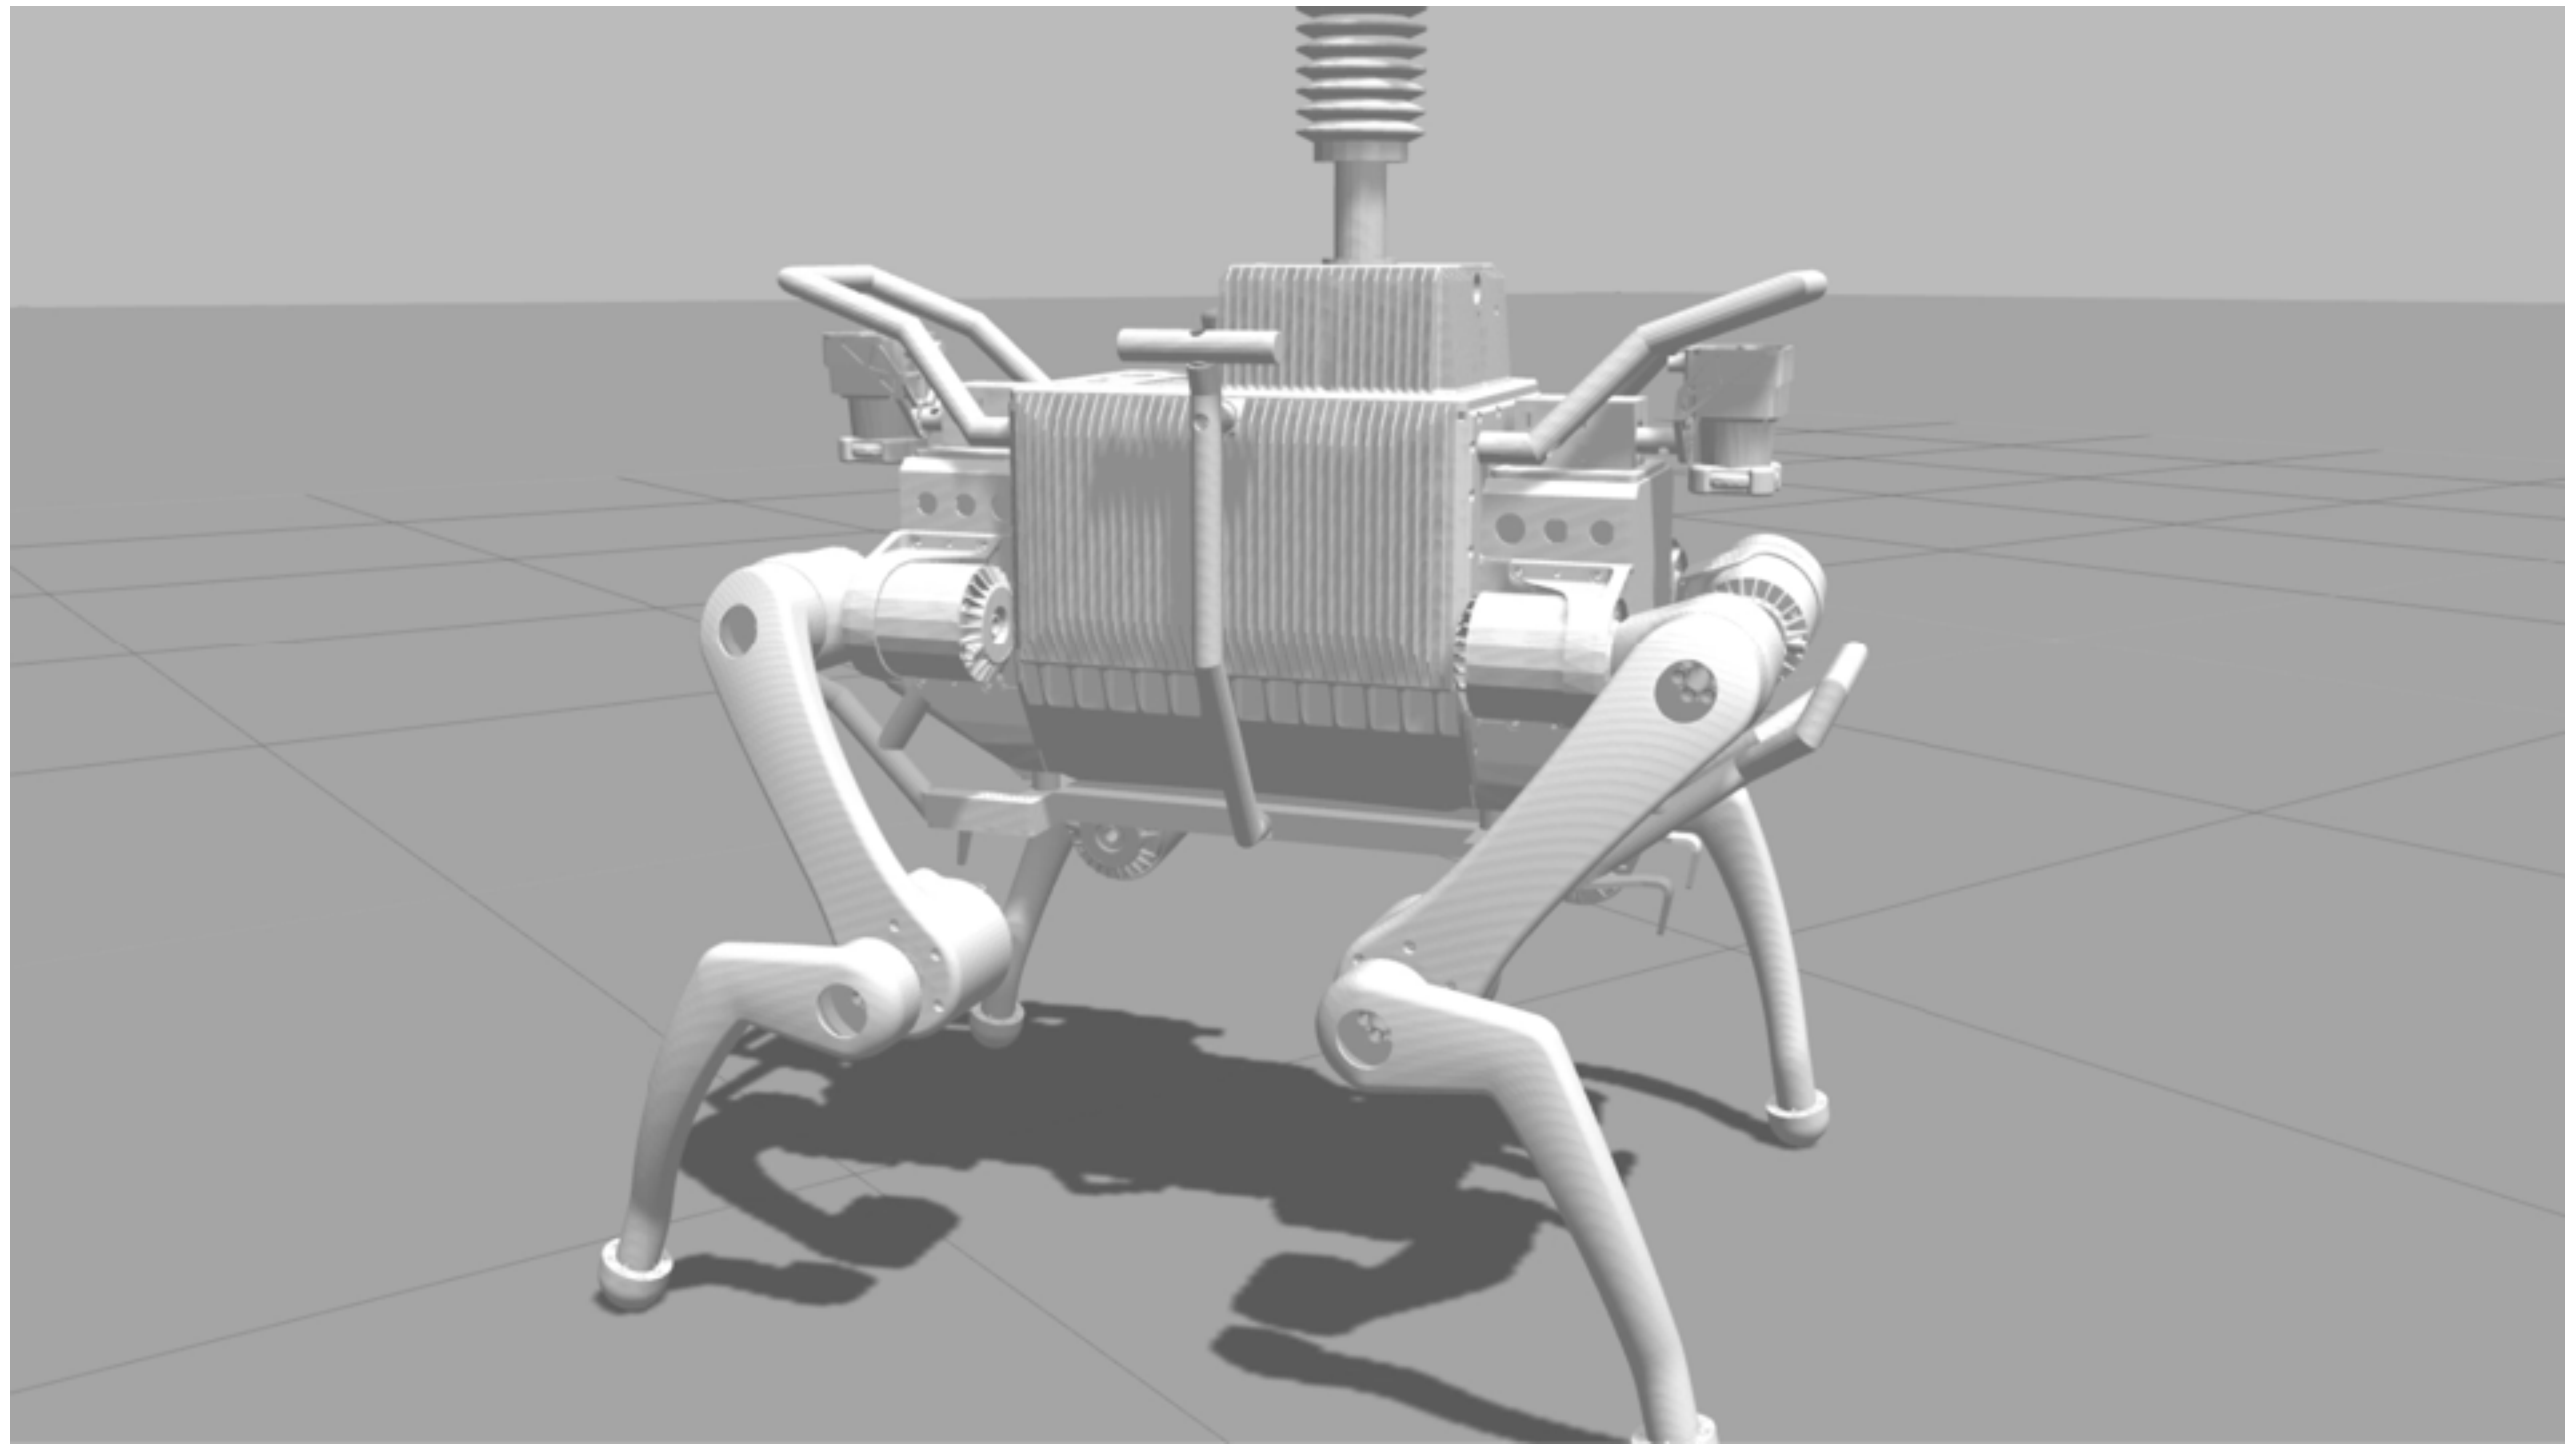
- Lots of tests on hardware
  - ➡ Weekly “shakeouts” for defined tasks
  - ➡ Lots of demos

Software Tools – How We (Try) To Keep Things Smooth

- Lots of tests on hardware
  - ➡ Weekly “shakeouts” for defined tasks
  - ➡ Lots of demos
- Continuous Integration
  - ➡ Jenkins
  - ➡ Unit tests (after each change)
  - ➡ ROS integration tests (at night)

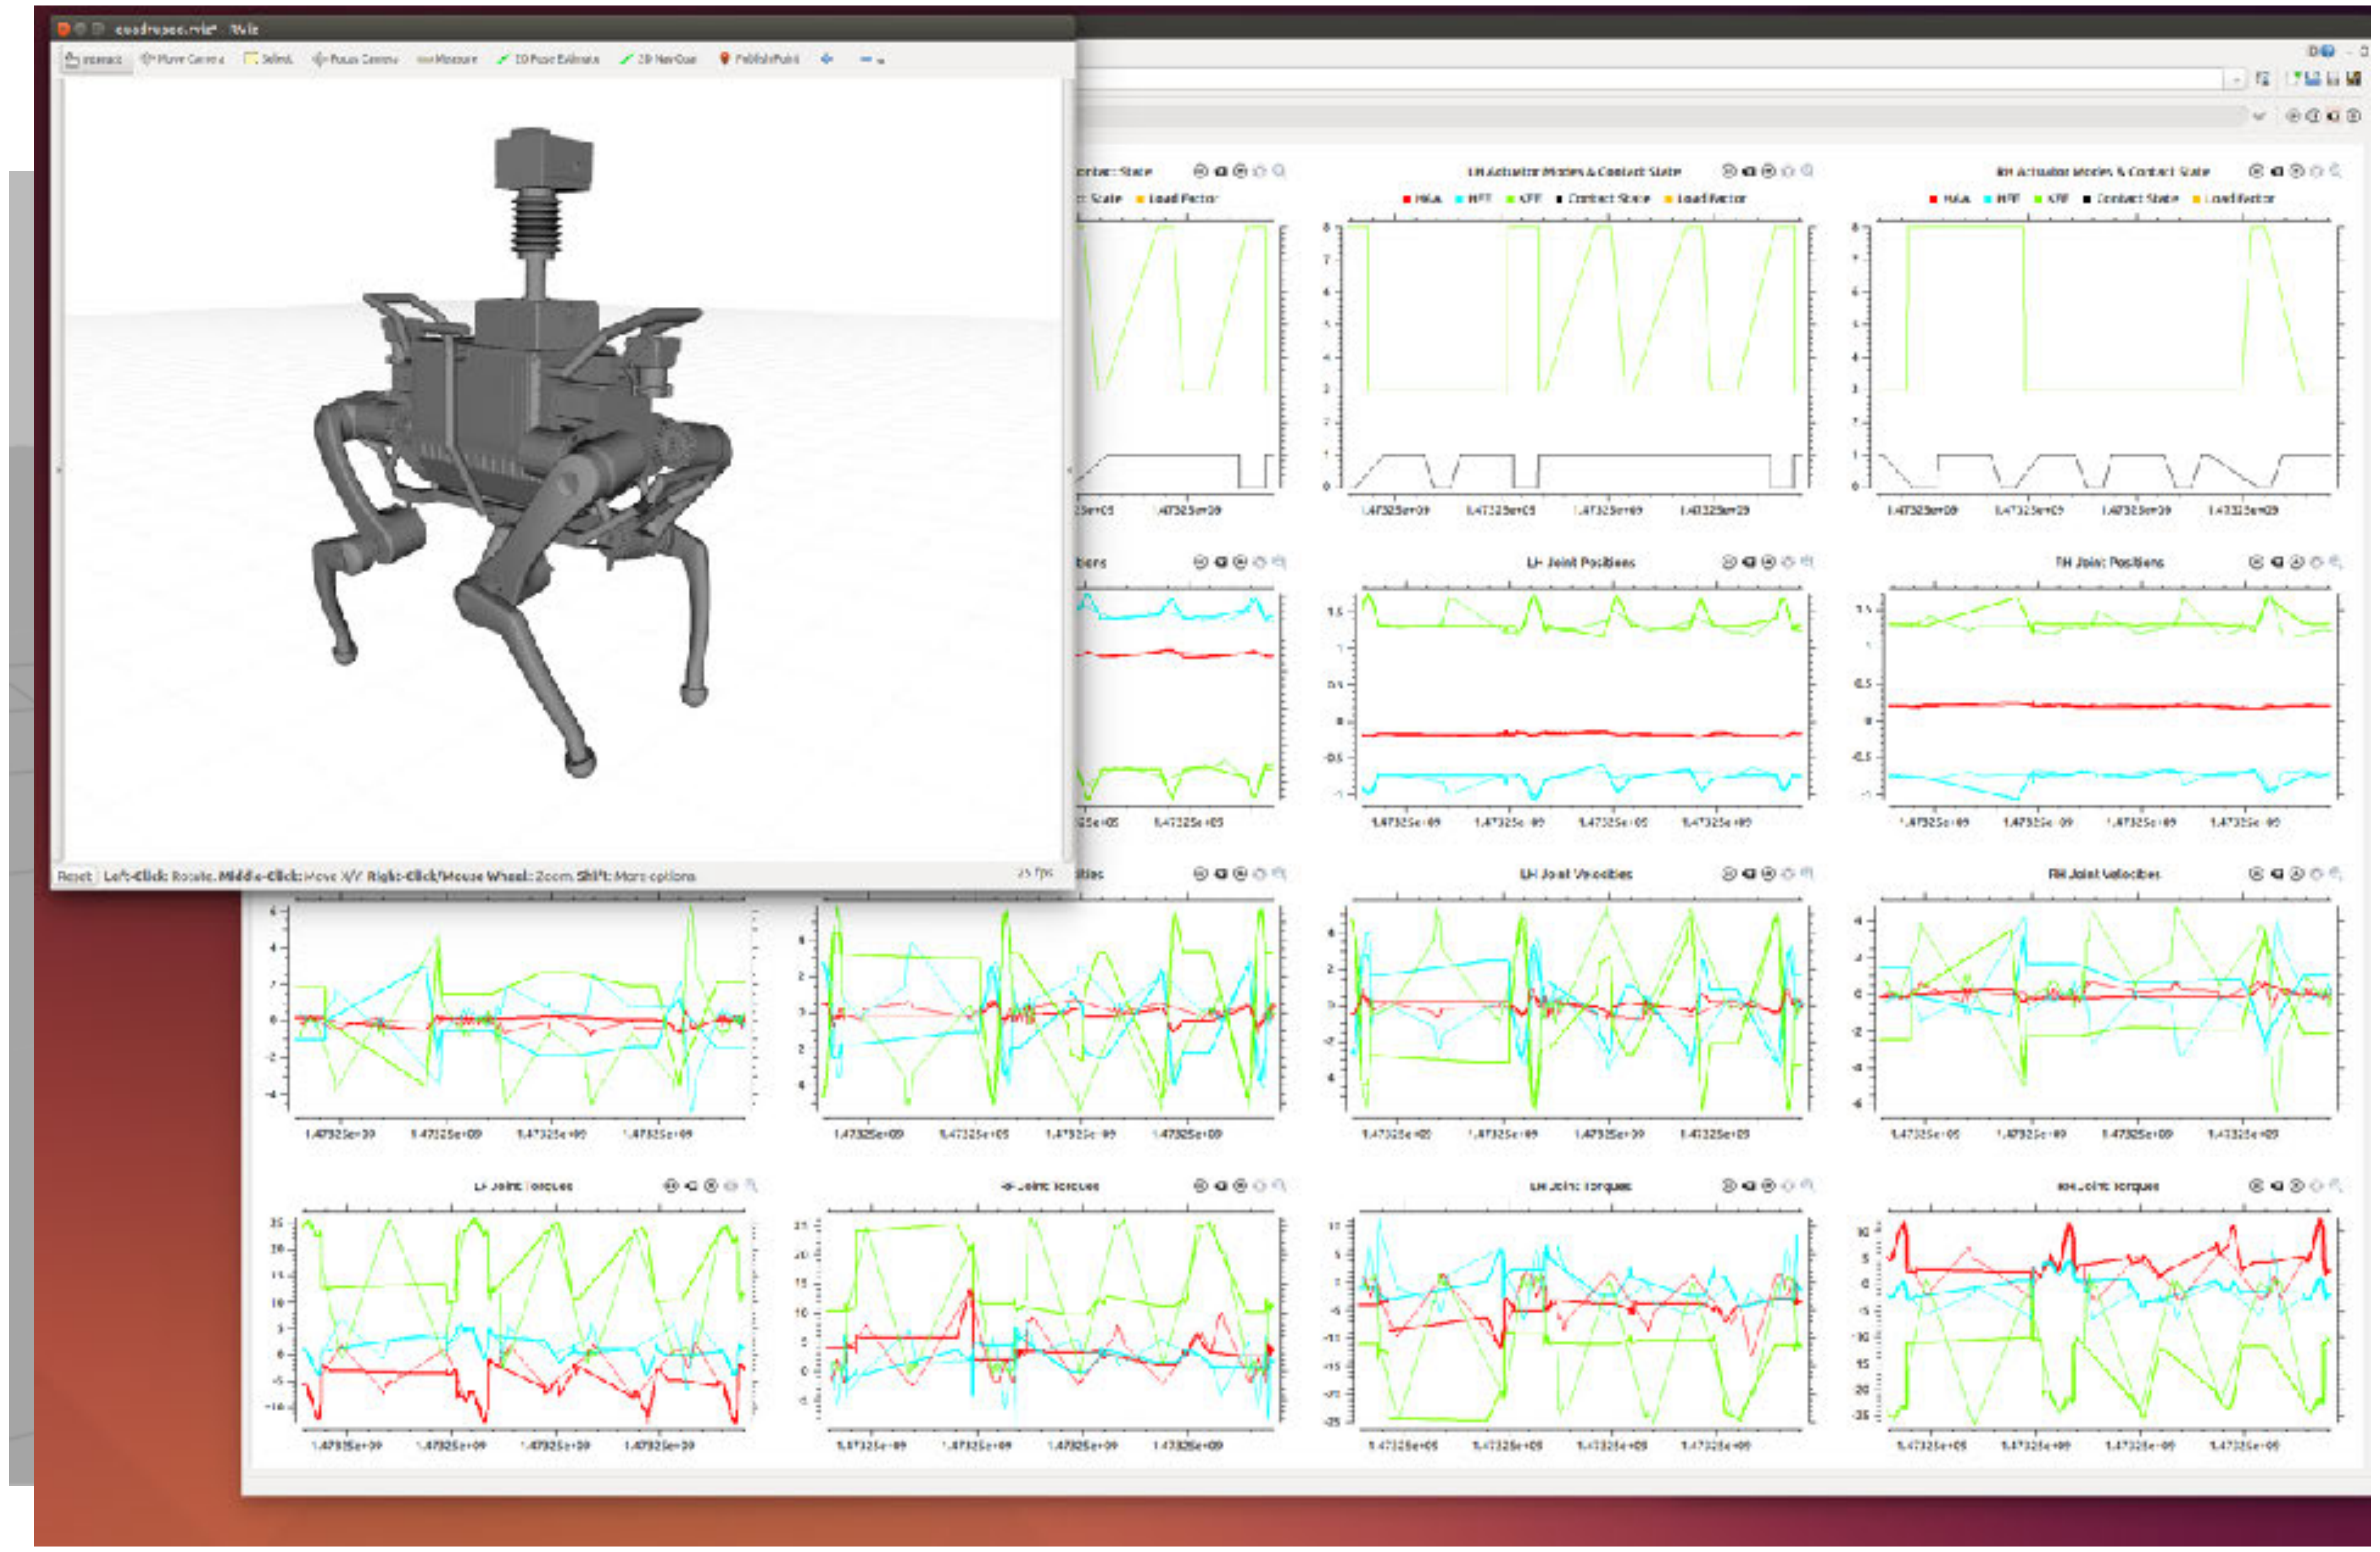
Software Tools – How We (Try) To Keep Things Smooth

- Lots of tests on hardware
  - ➡ Weekly "shakeouts" for defined tasks
  - ➡ Lots of demos
- Continuous Integration
  - ➡ Jenkins
  - ➡ Unit tests (after each change)
  - ➡ ROS integration tests (at night)



Software Tools – How We (Try) To Keep Things Smooth

- Lots of tests on hardware
  - ➡ Weekly "shakeouts" for defined tasks
  - ➡ Lots of demos
- Continuous Integration
  - ➡ Jenkins
  - ➡ Unit tests (after each change)
  - ➡ ROS integration tests (at night)
- Logging (rosbag)
  - ➡ All important information is always logged
  - ➡ Review logs with RViz and RQT Multiplot



Conclusion

- Introduced 10 open-source packages, 250+ internal packages
- Coordination of a big team is hard
- Good naming is important
- ROS as “glue”
- WiFi is often problematic
- Reliability is crucial

Thank You
